

Adriana's Awesome Portfolio

T1A2 - Portfolio Slide Deck

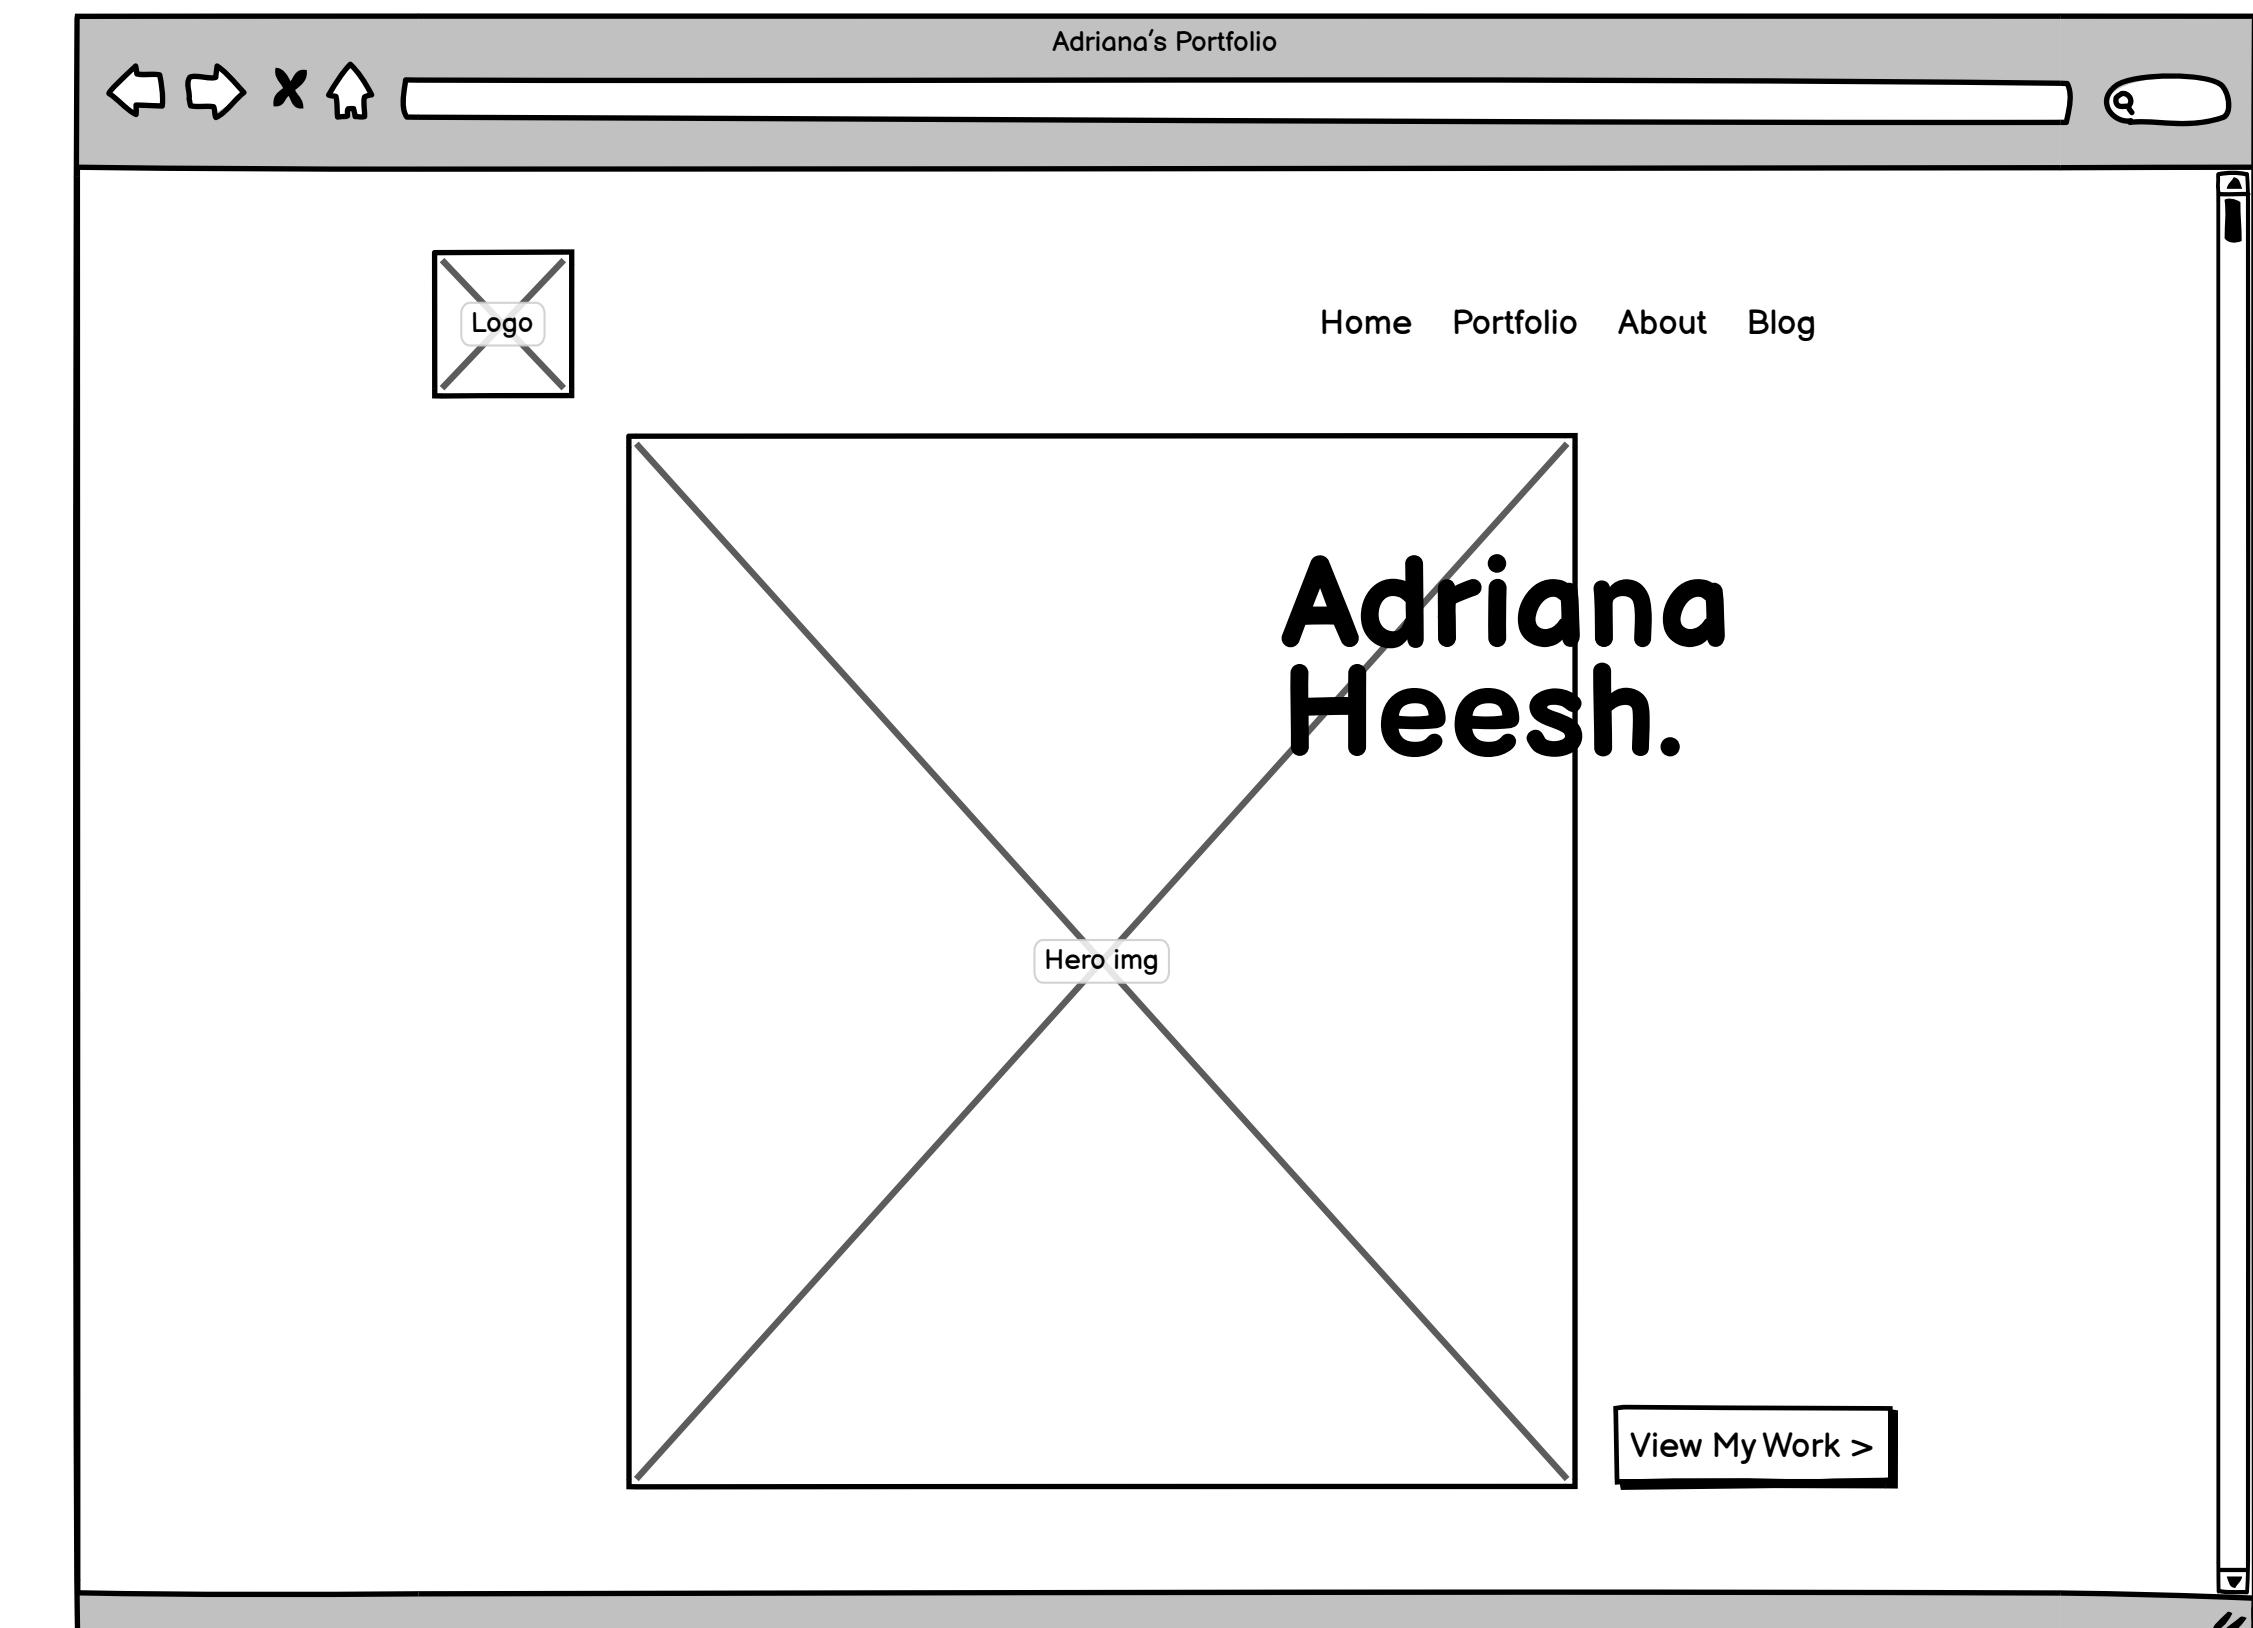

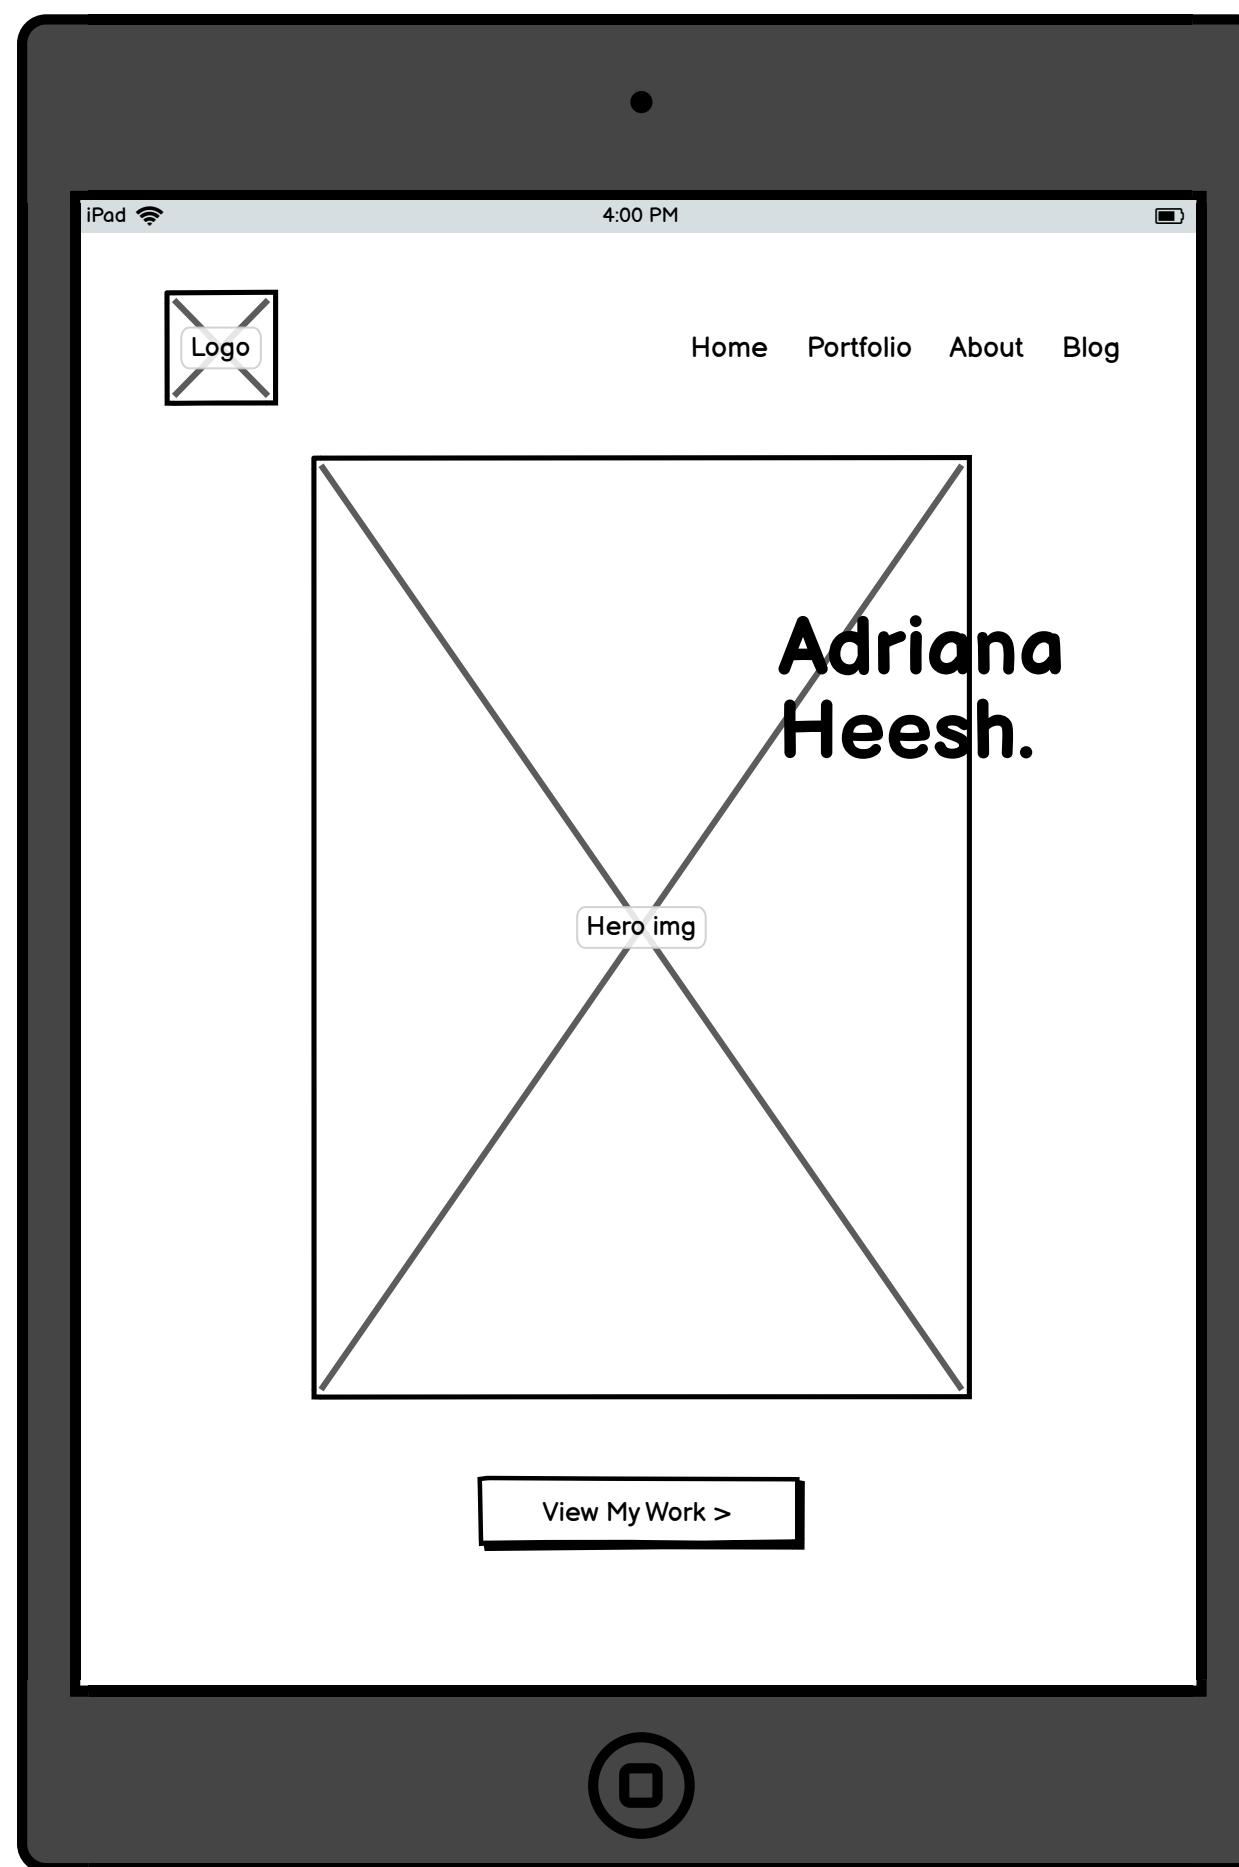

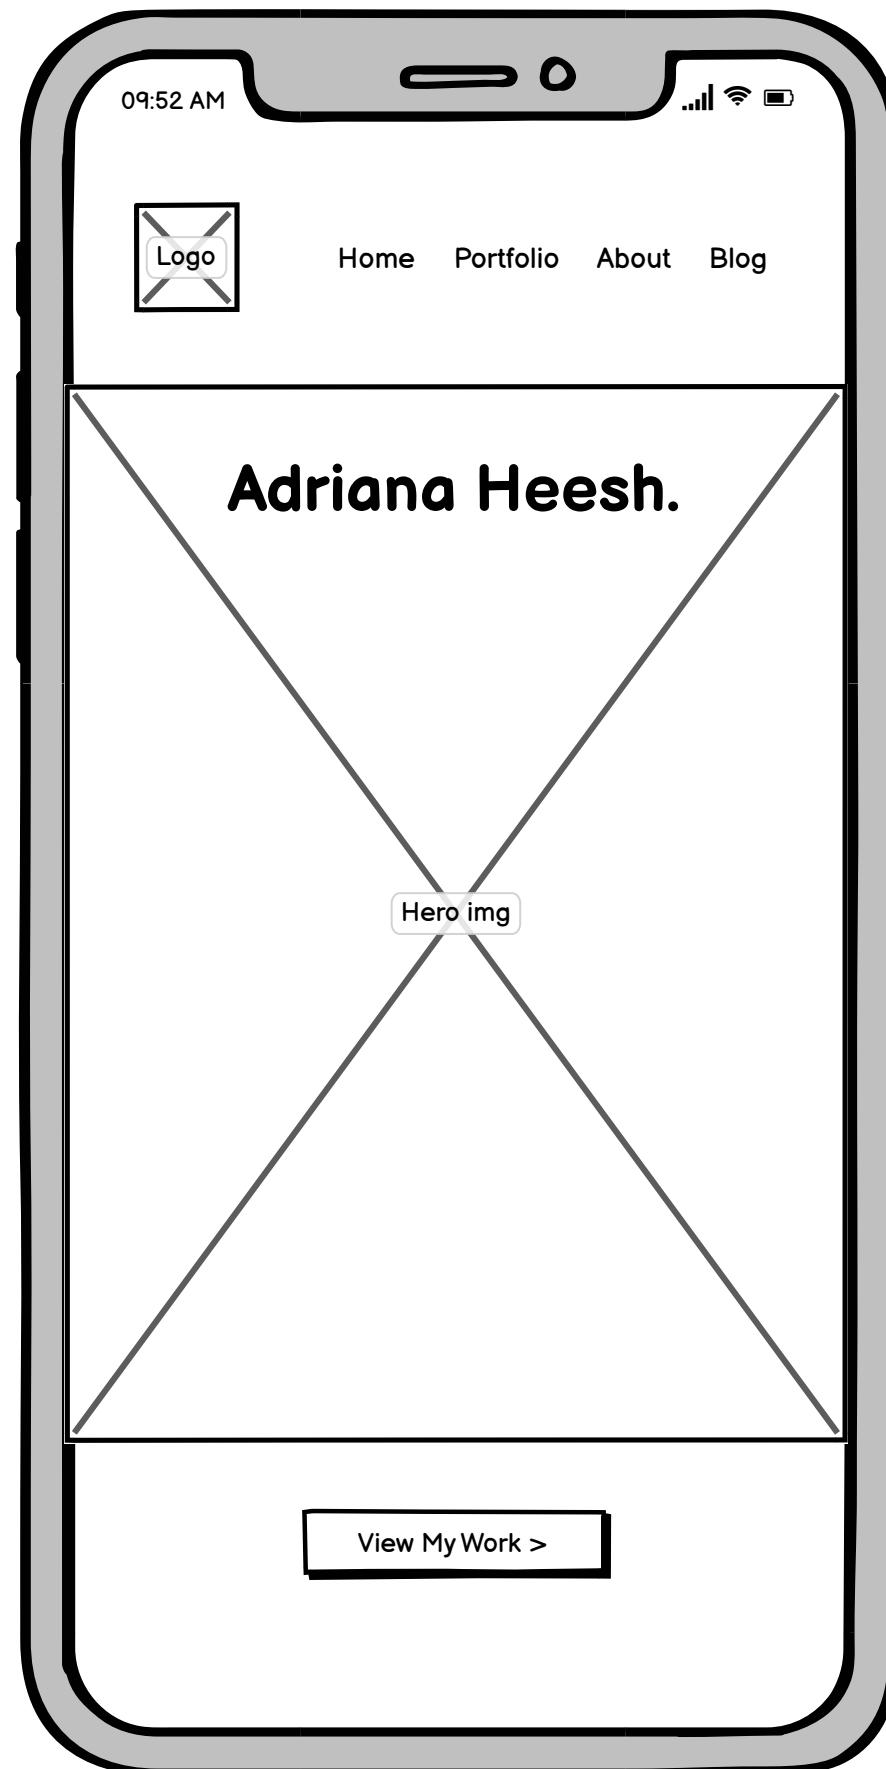

Sitemap

Goals:

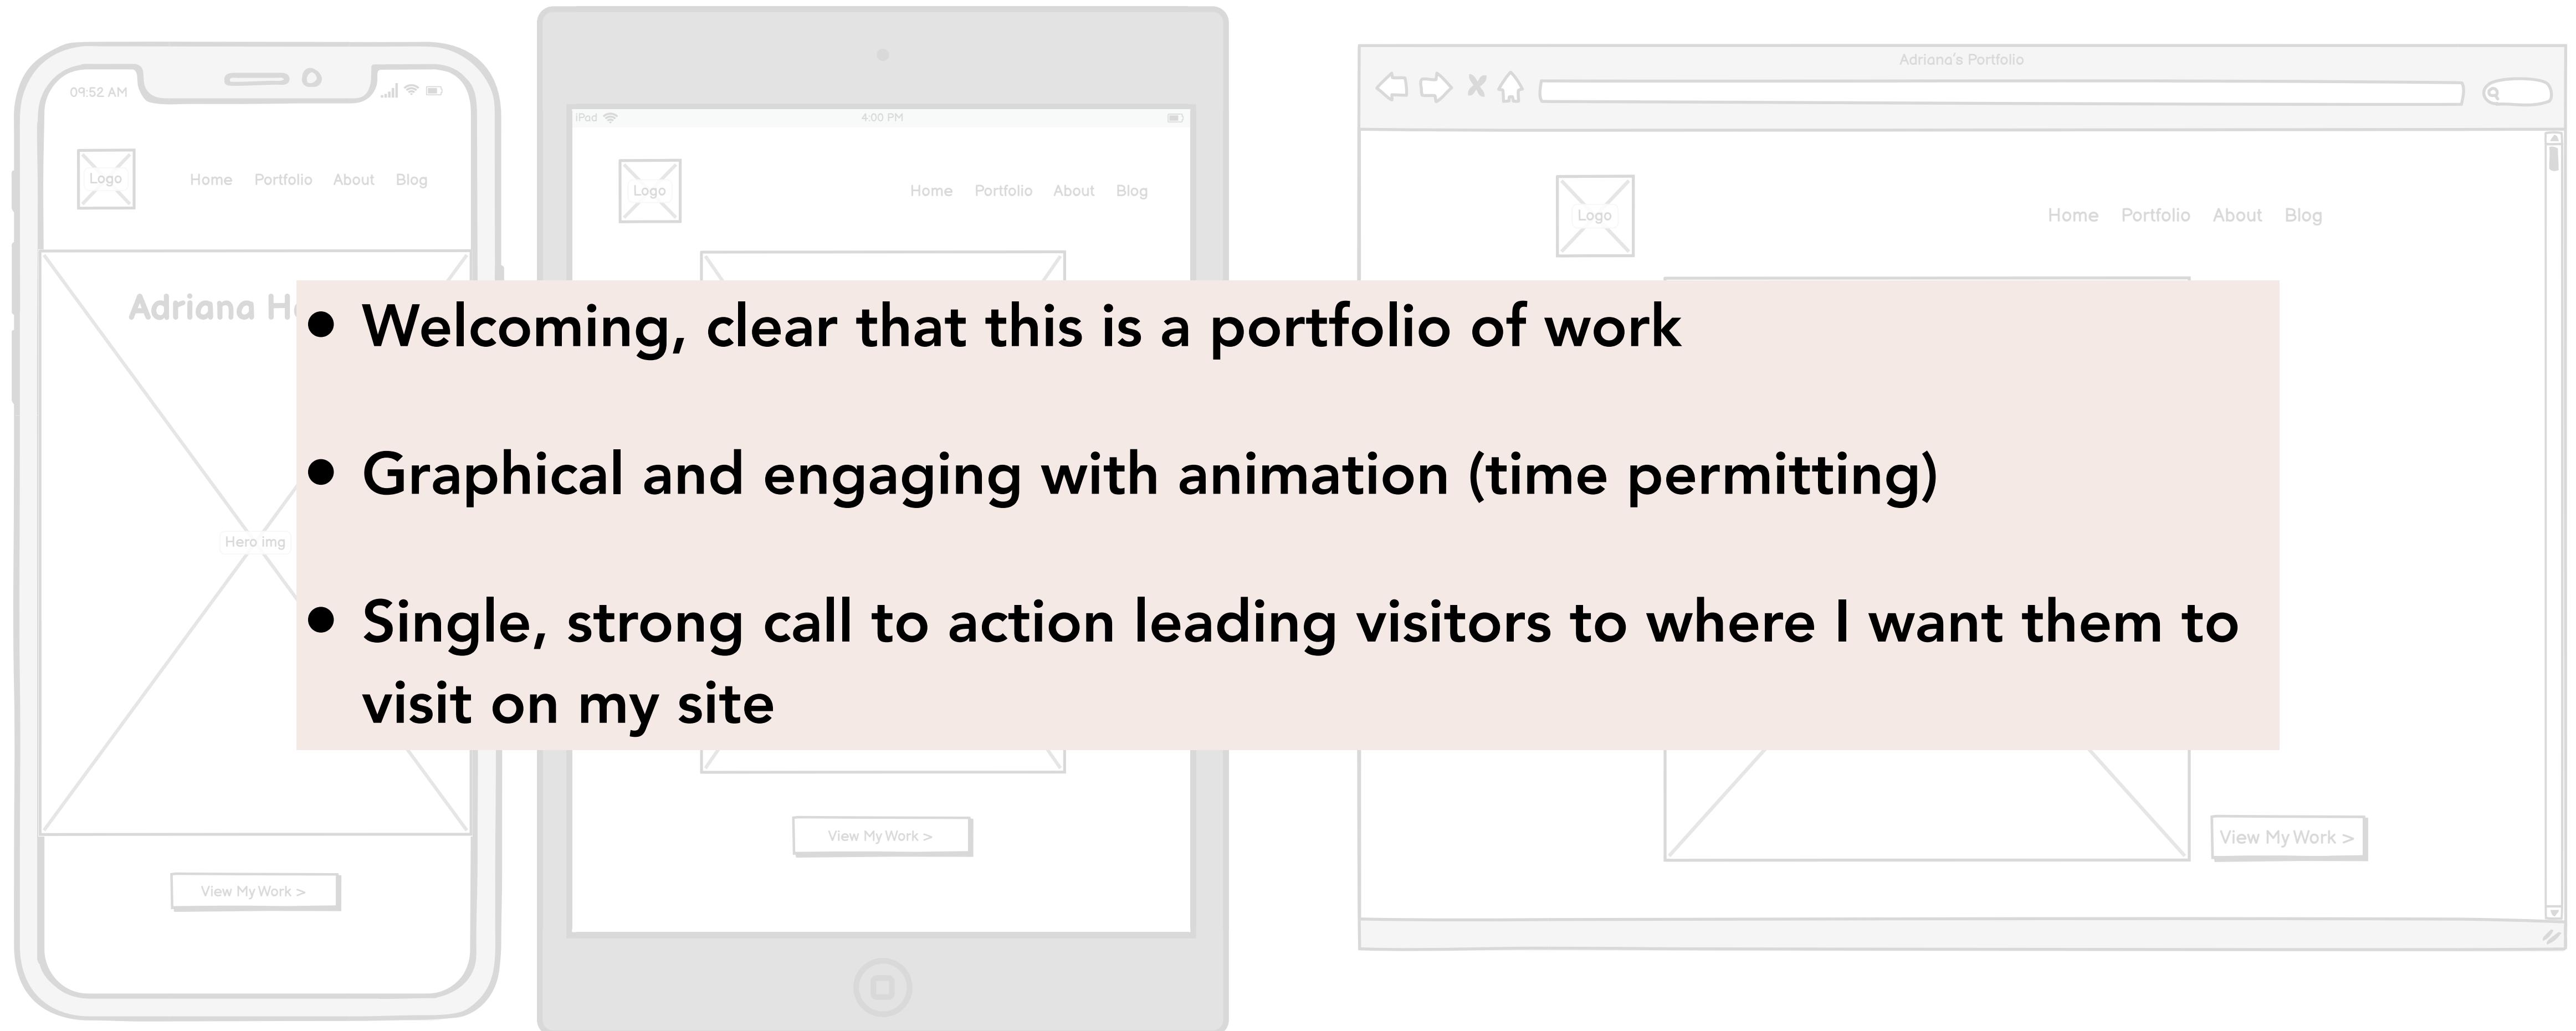

- Website flow makes sense and is easy to navigate
- Met the assessment criteria
- Easily updated in the future to reflect newer work

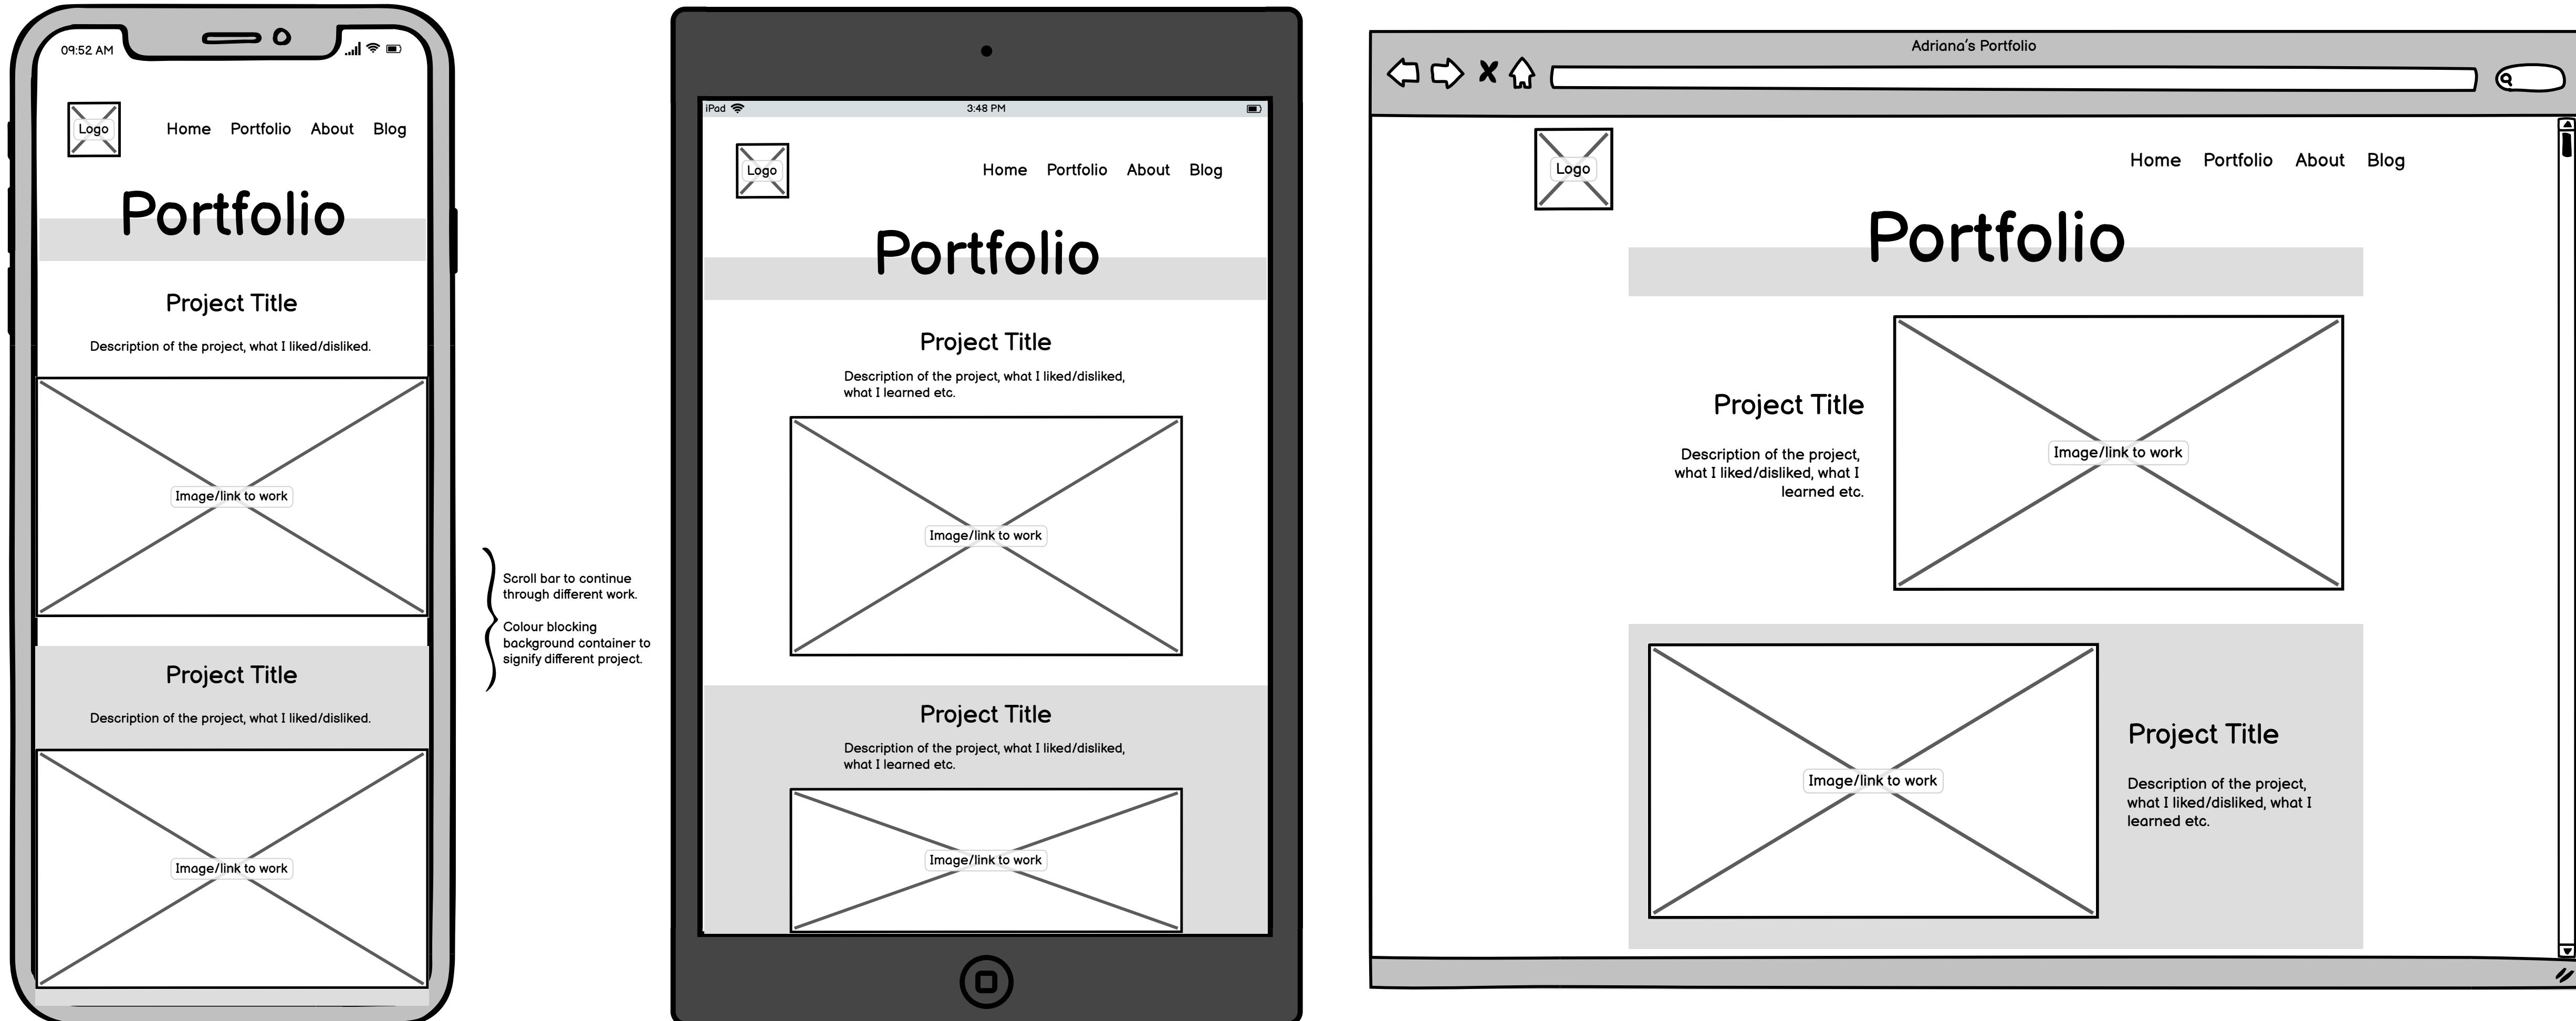

Wireframes - Home

Wireframes - Home

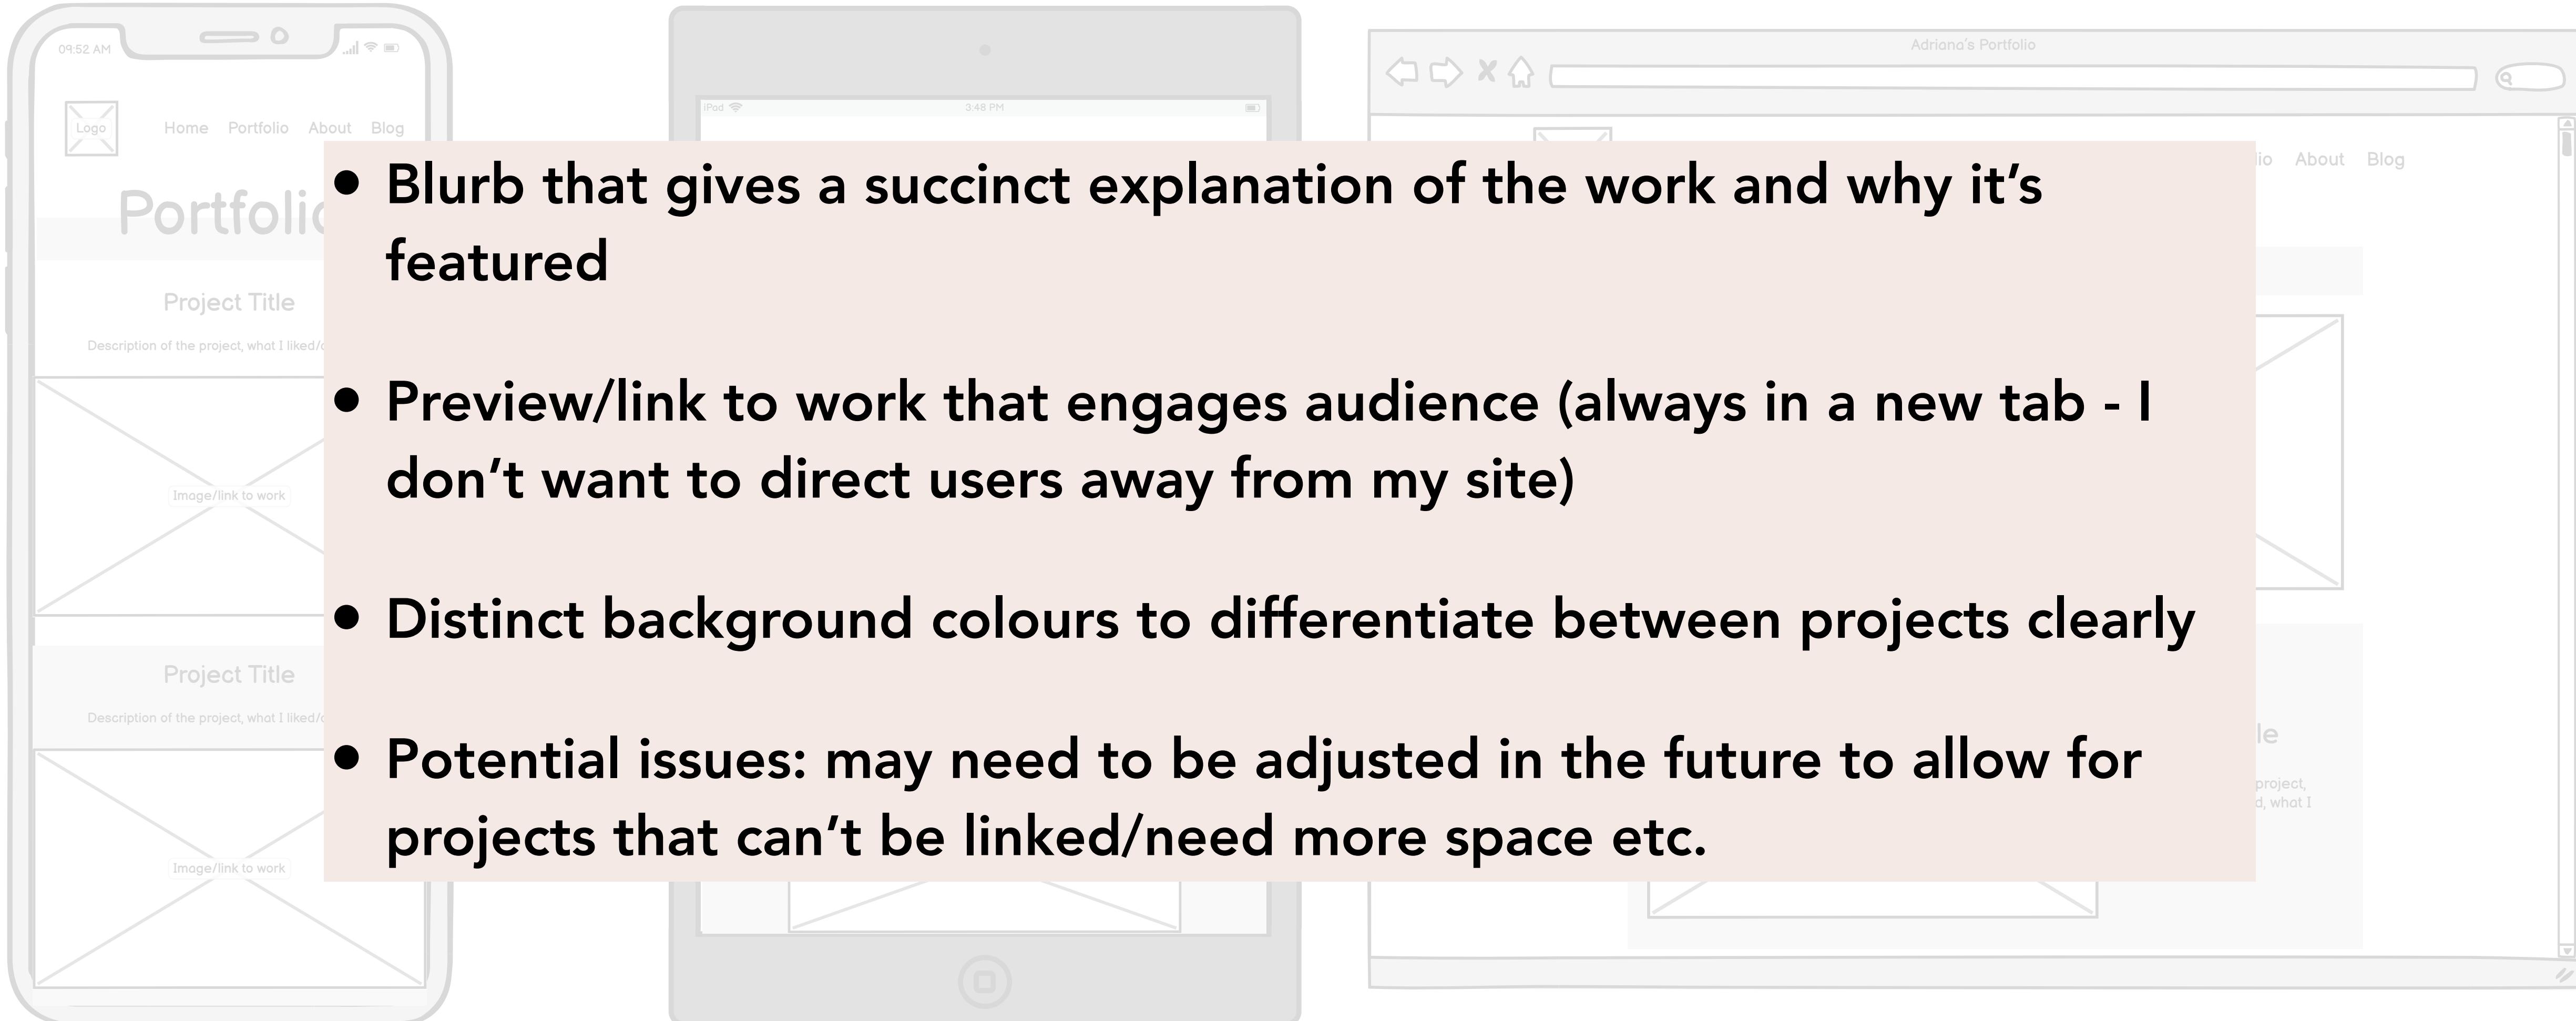

Wireframes - Work samples

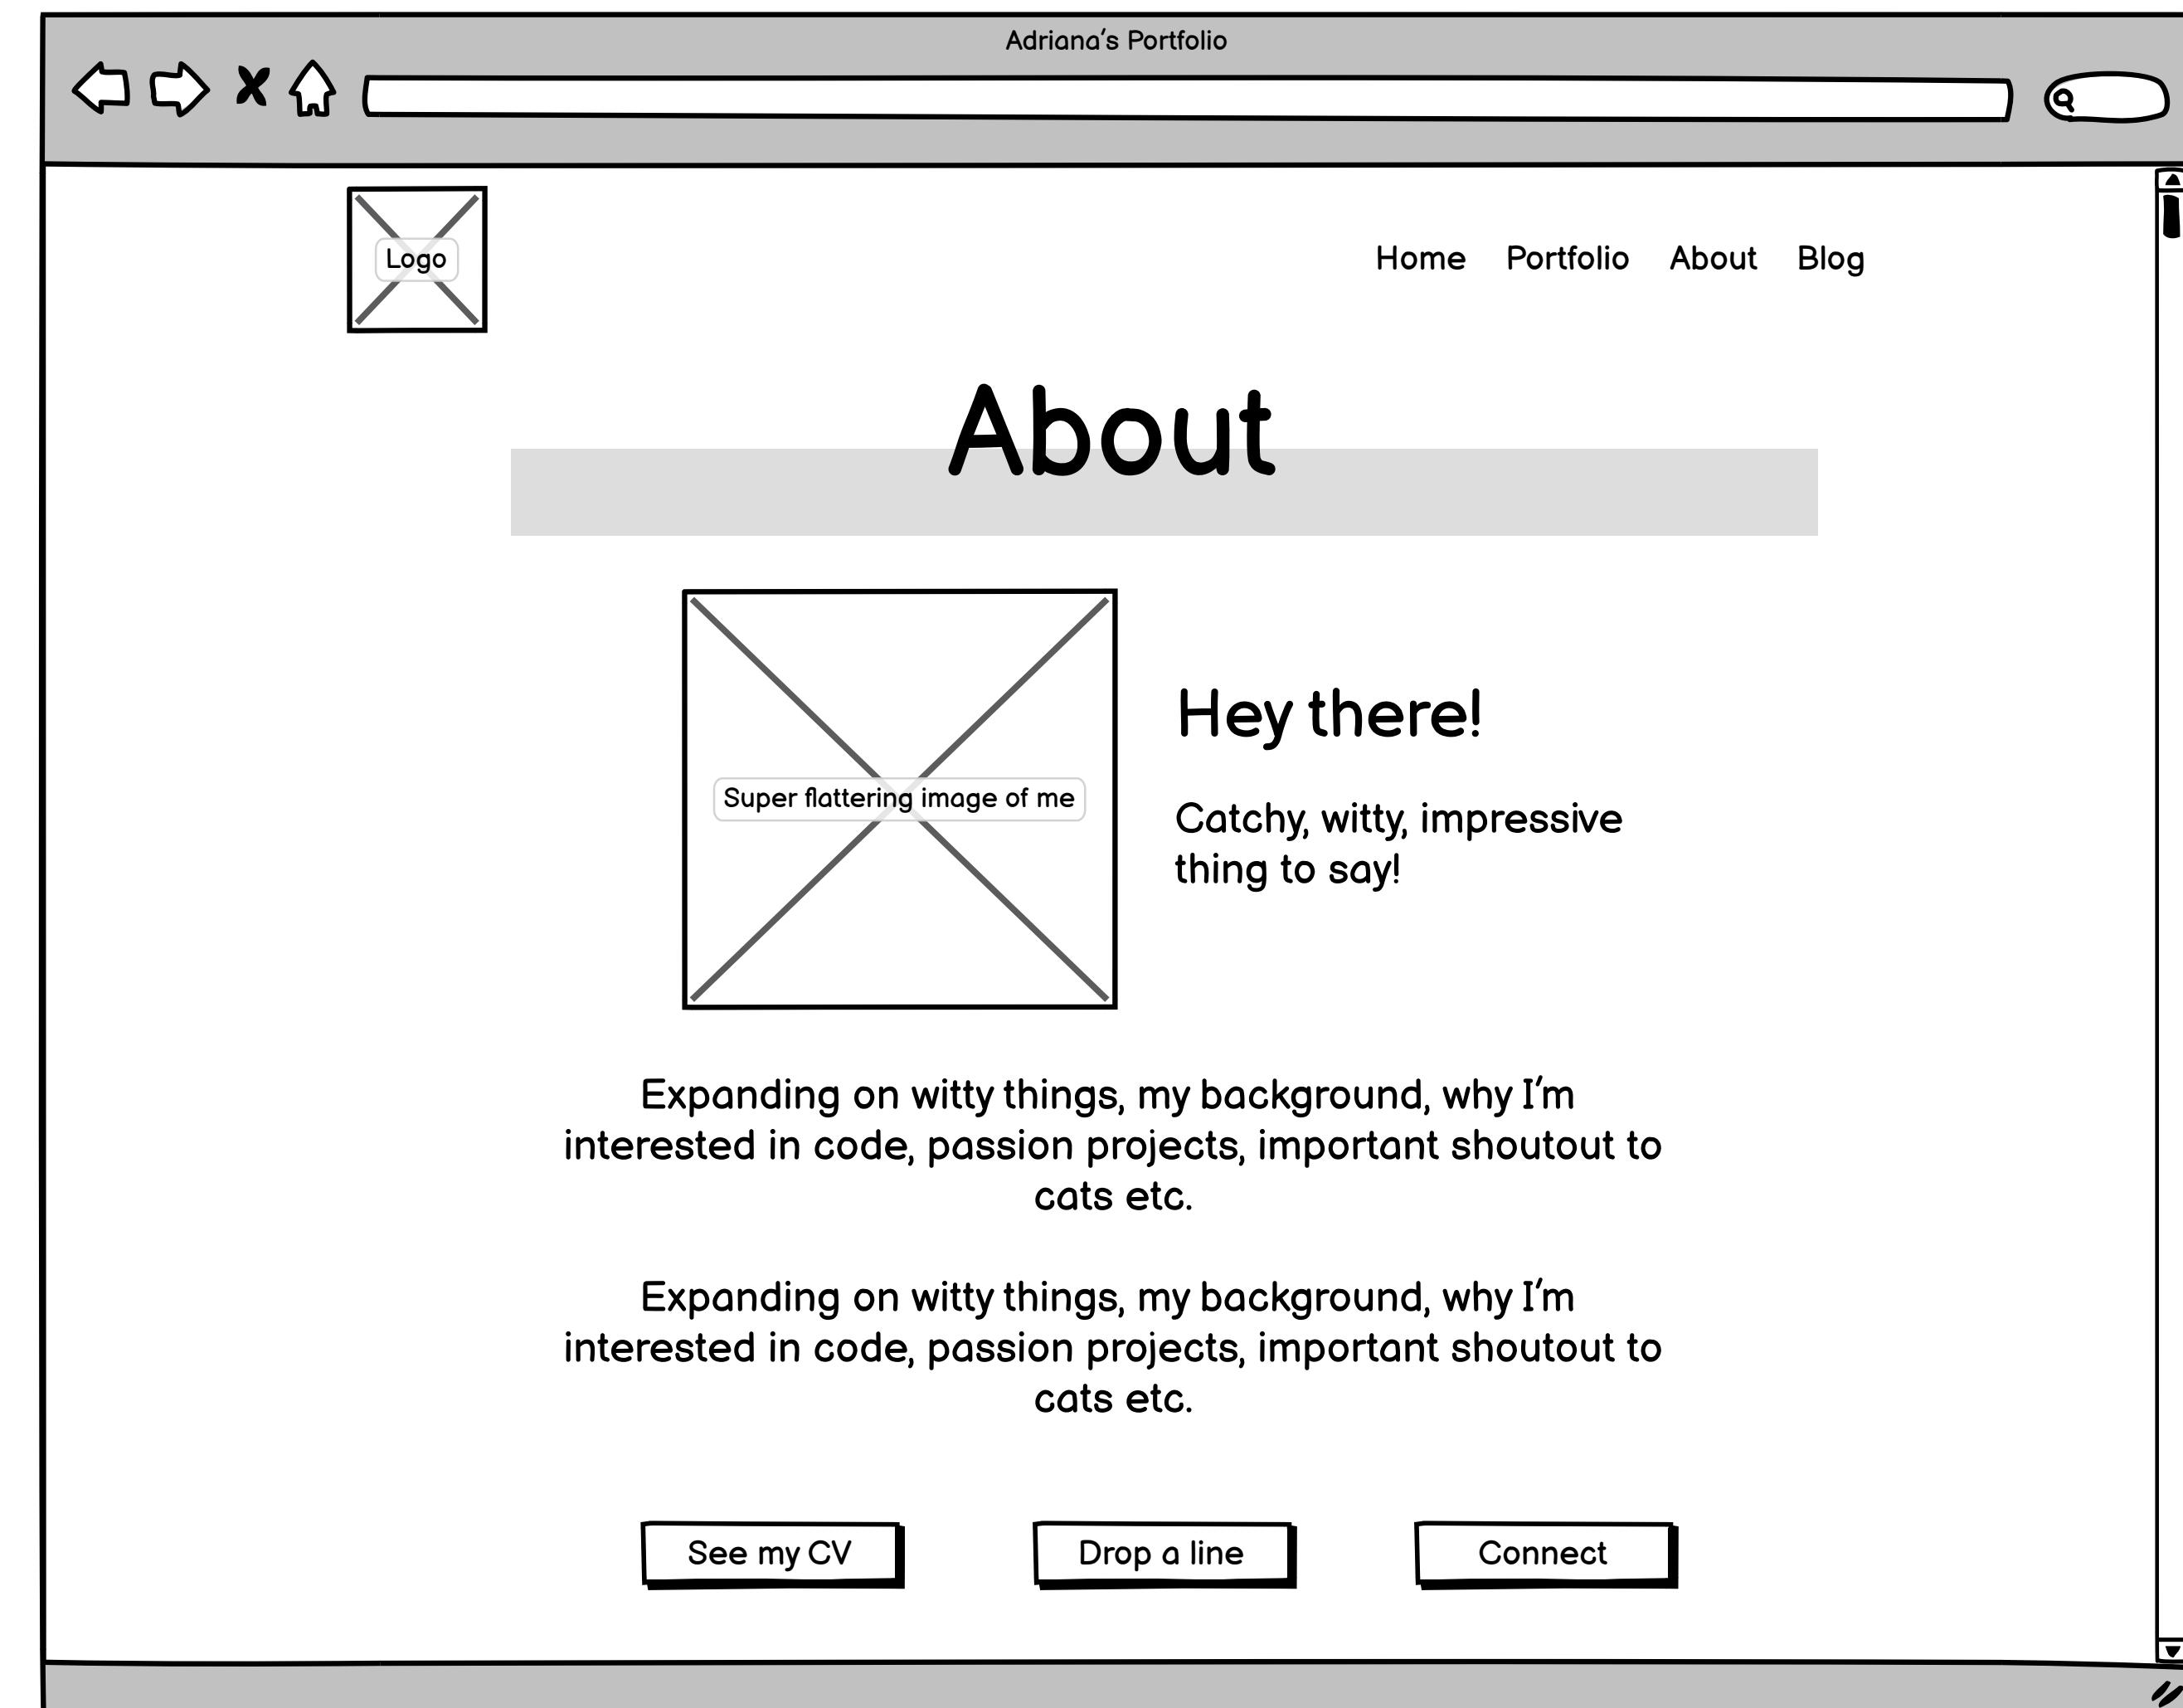

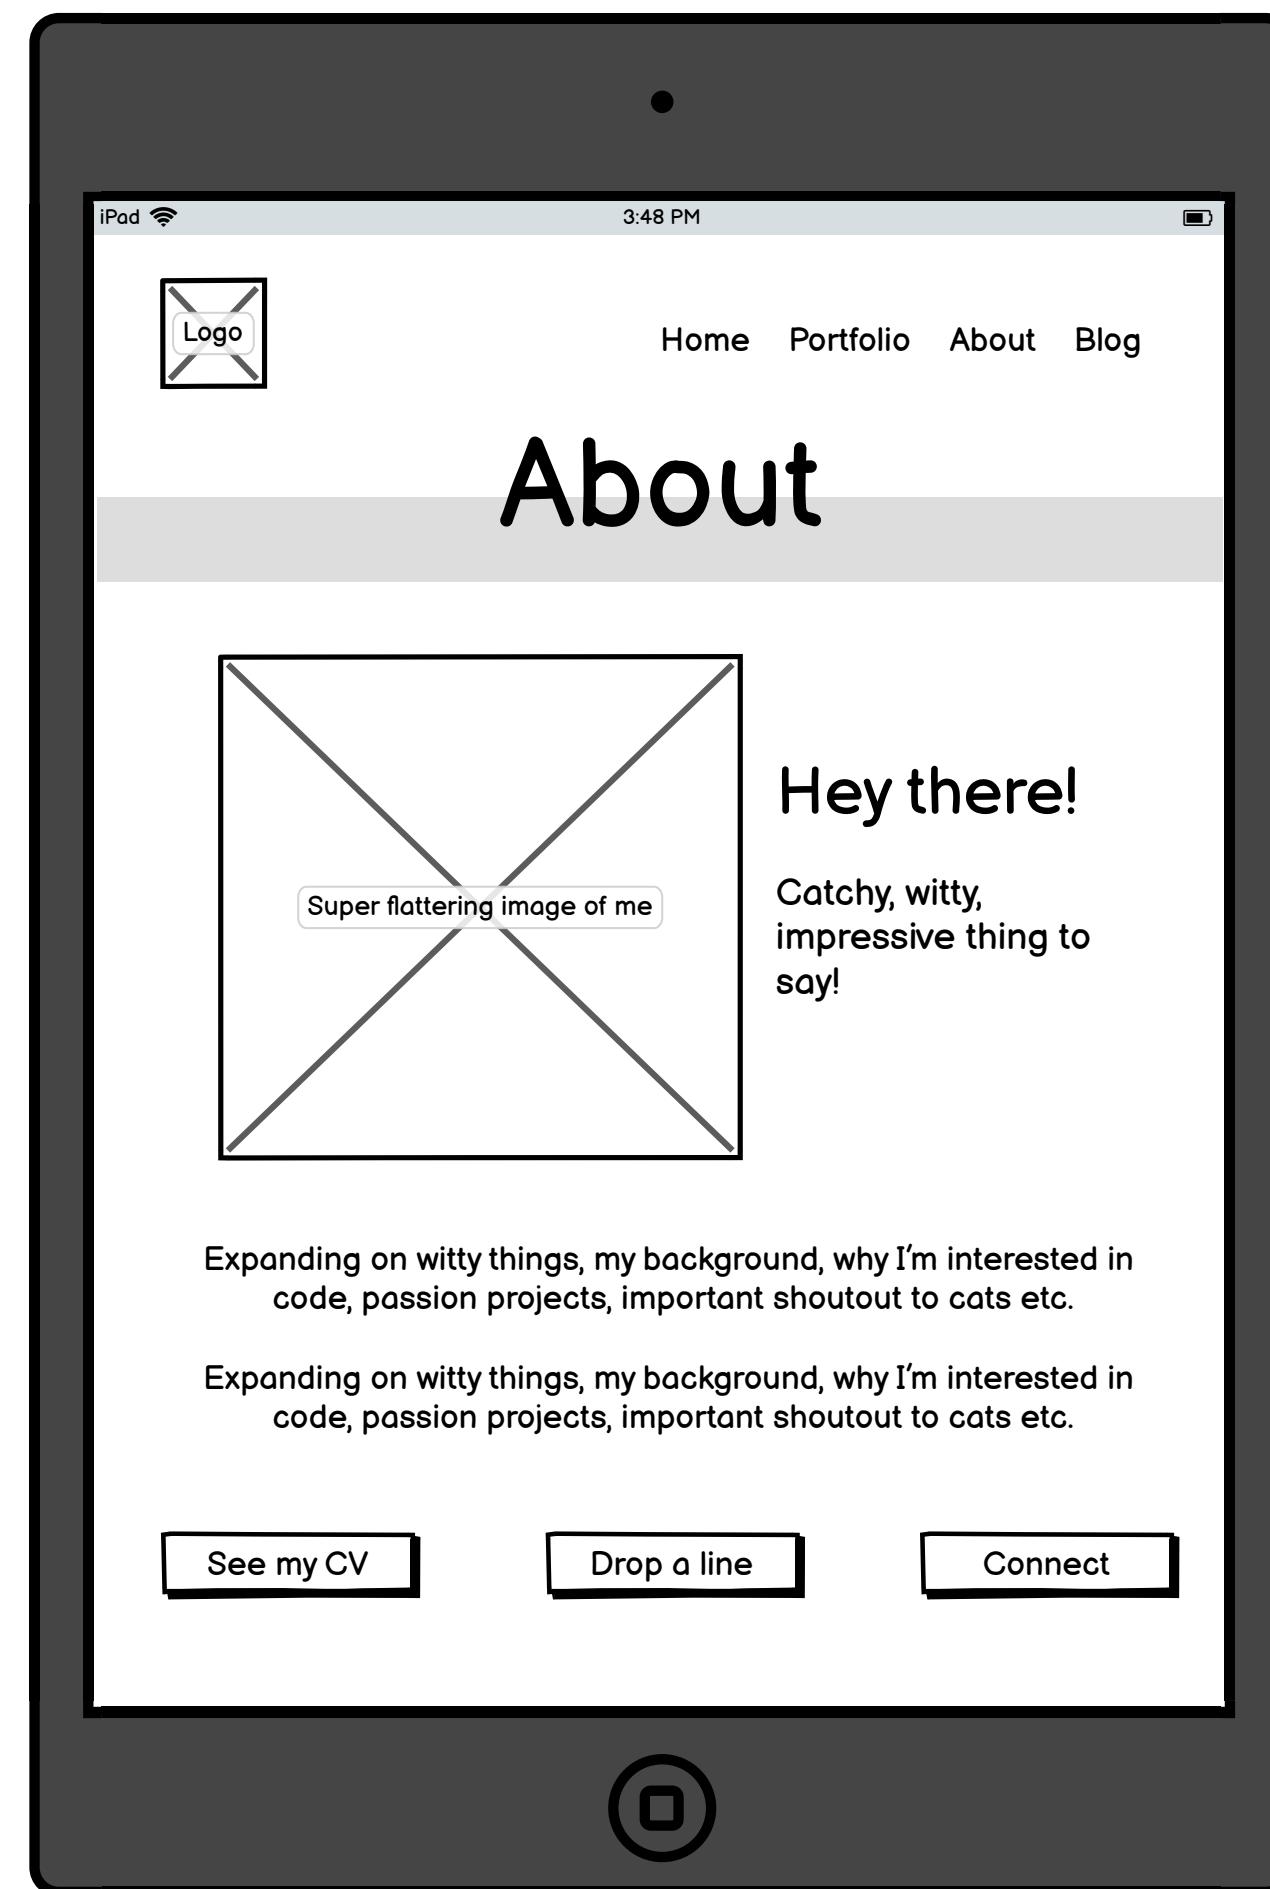

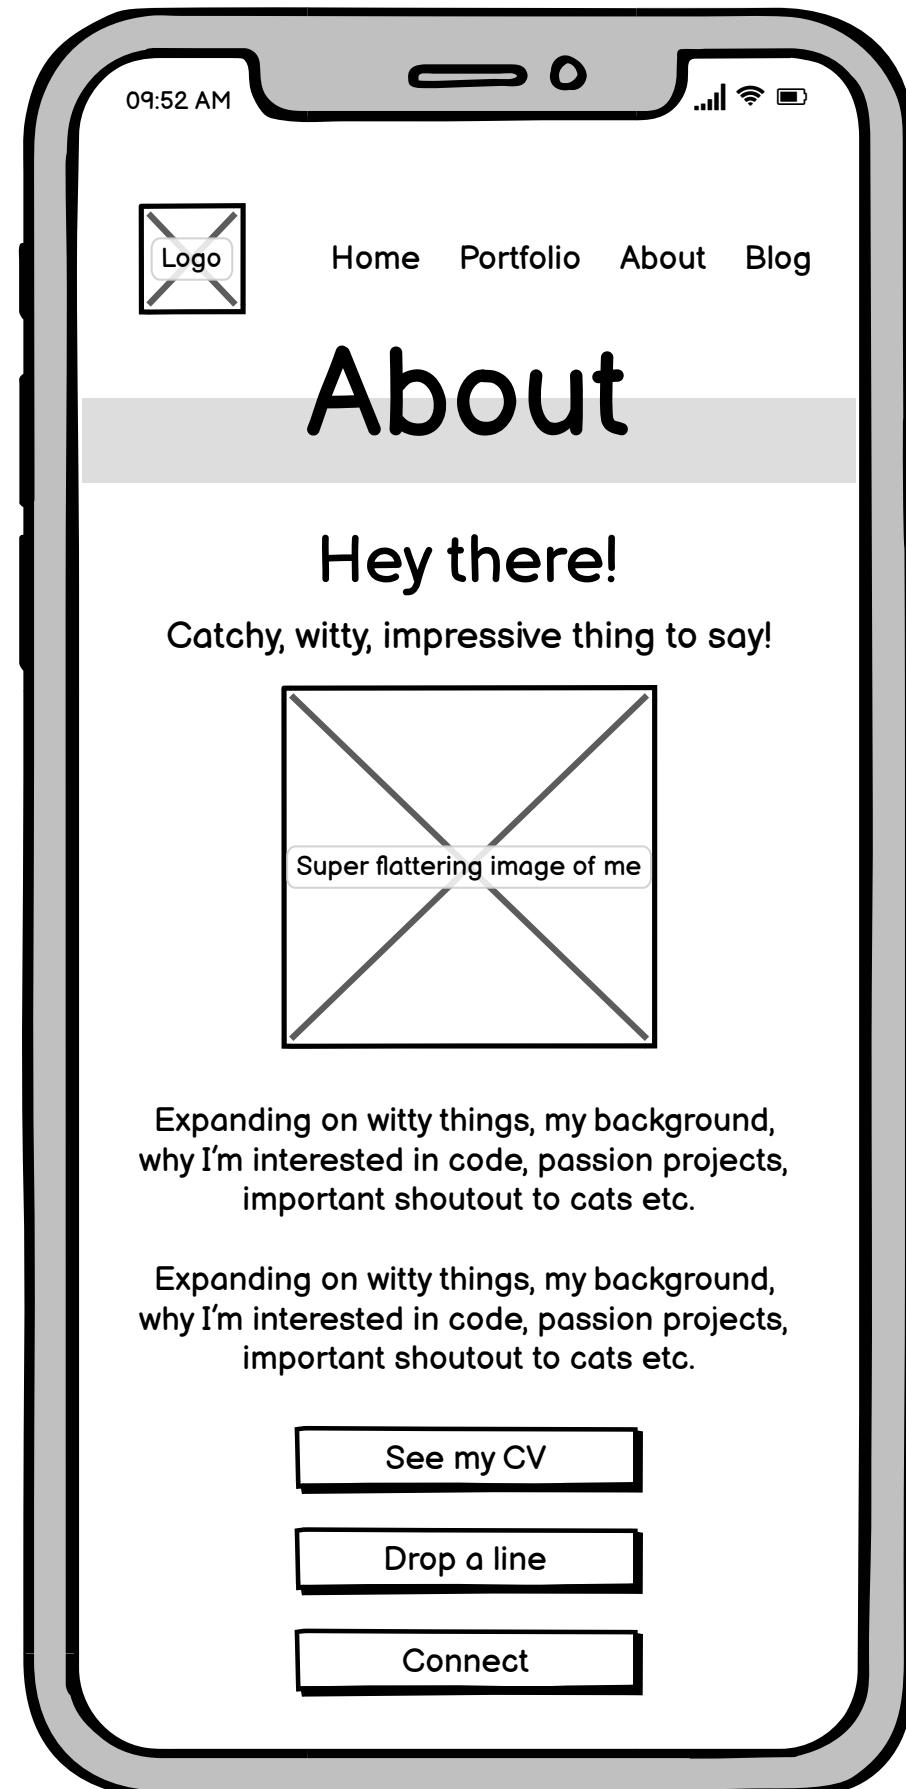

Wireframes - Work samples

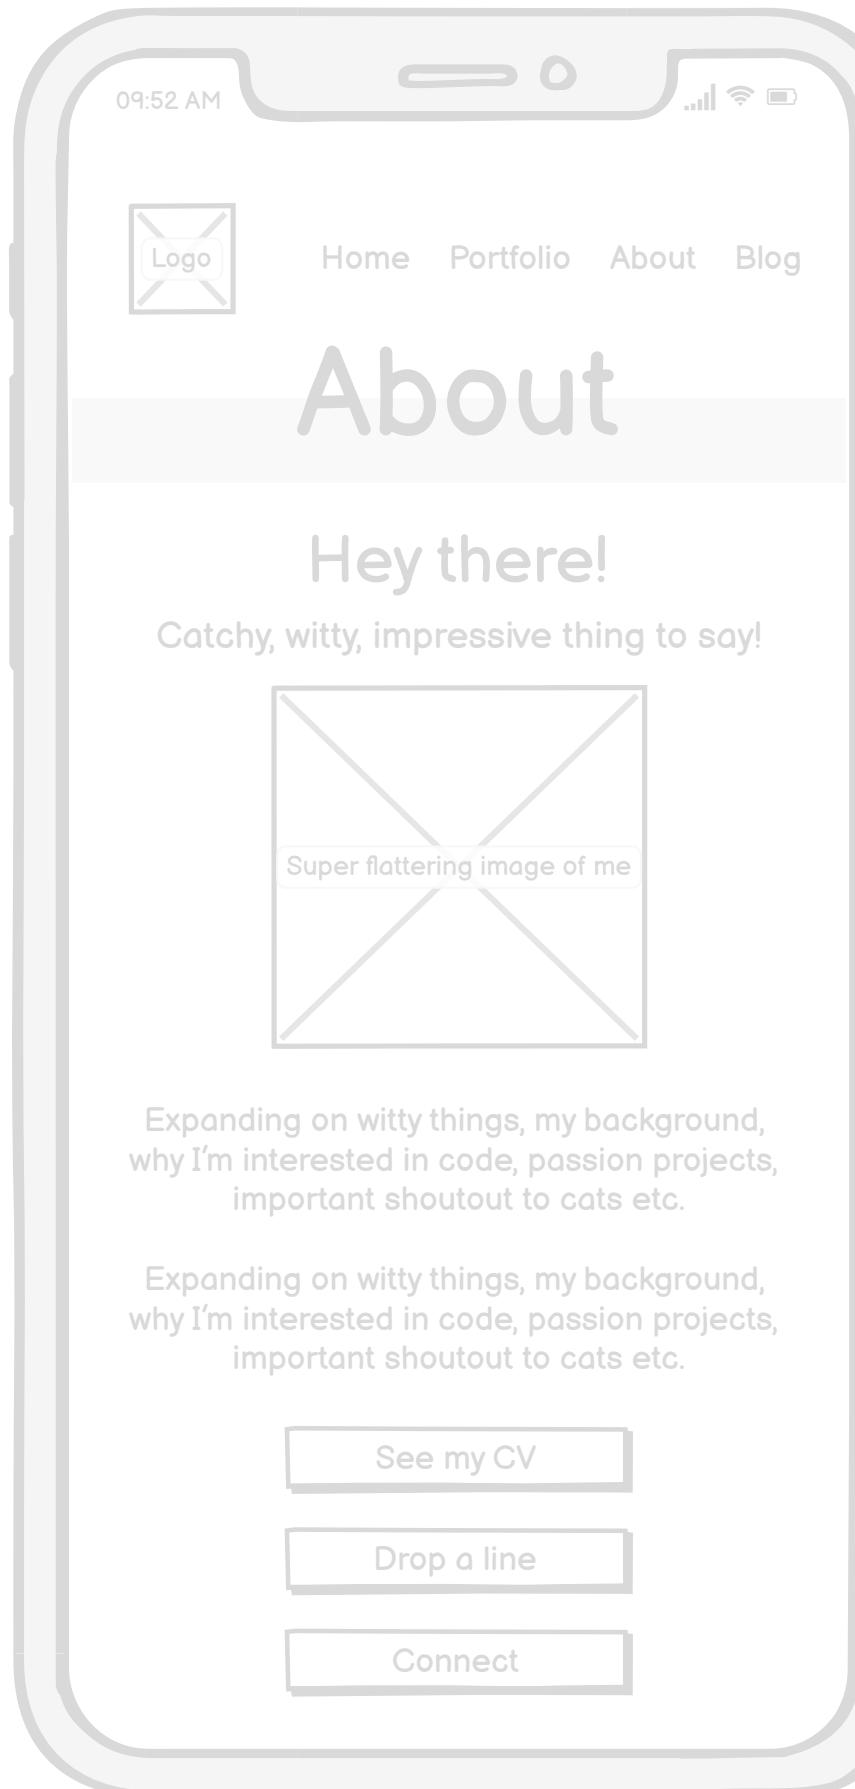

- Blurb that gives a succinct explanation of the work and why it's featured
- Preview/link to work that engages audience (always in a new tab - I don't want to direct users away from my site)
- Distinct background colours to differentiate between projects clearly
- Potential issues: may need to be adjusted in the future to allow for projects that can't be linked/need more space etc.

Wireframes - About

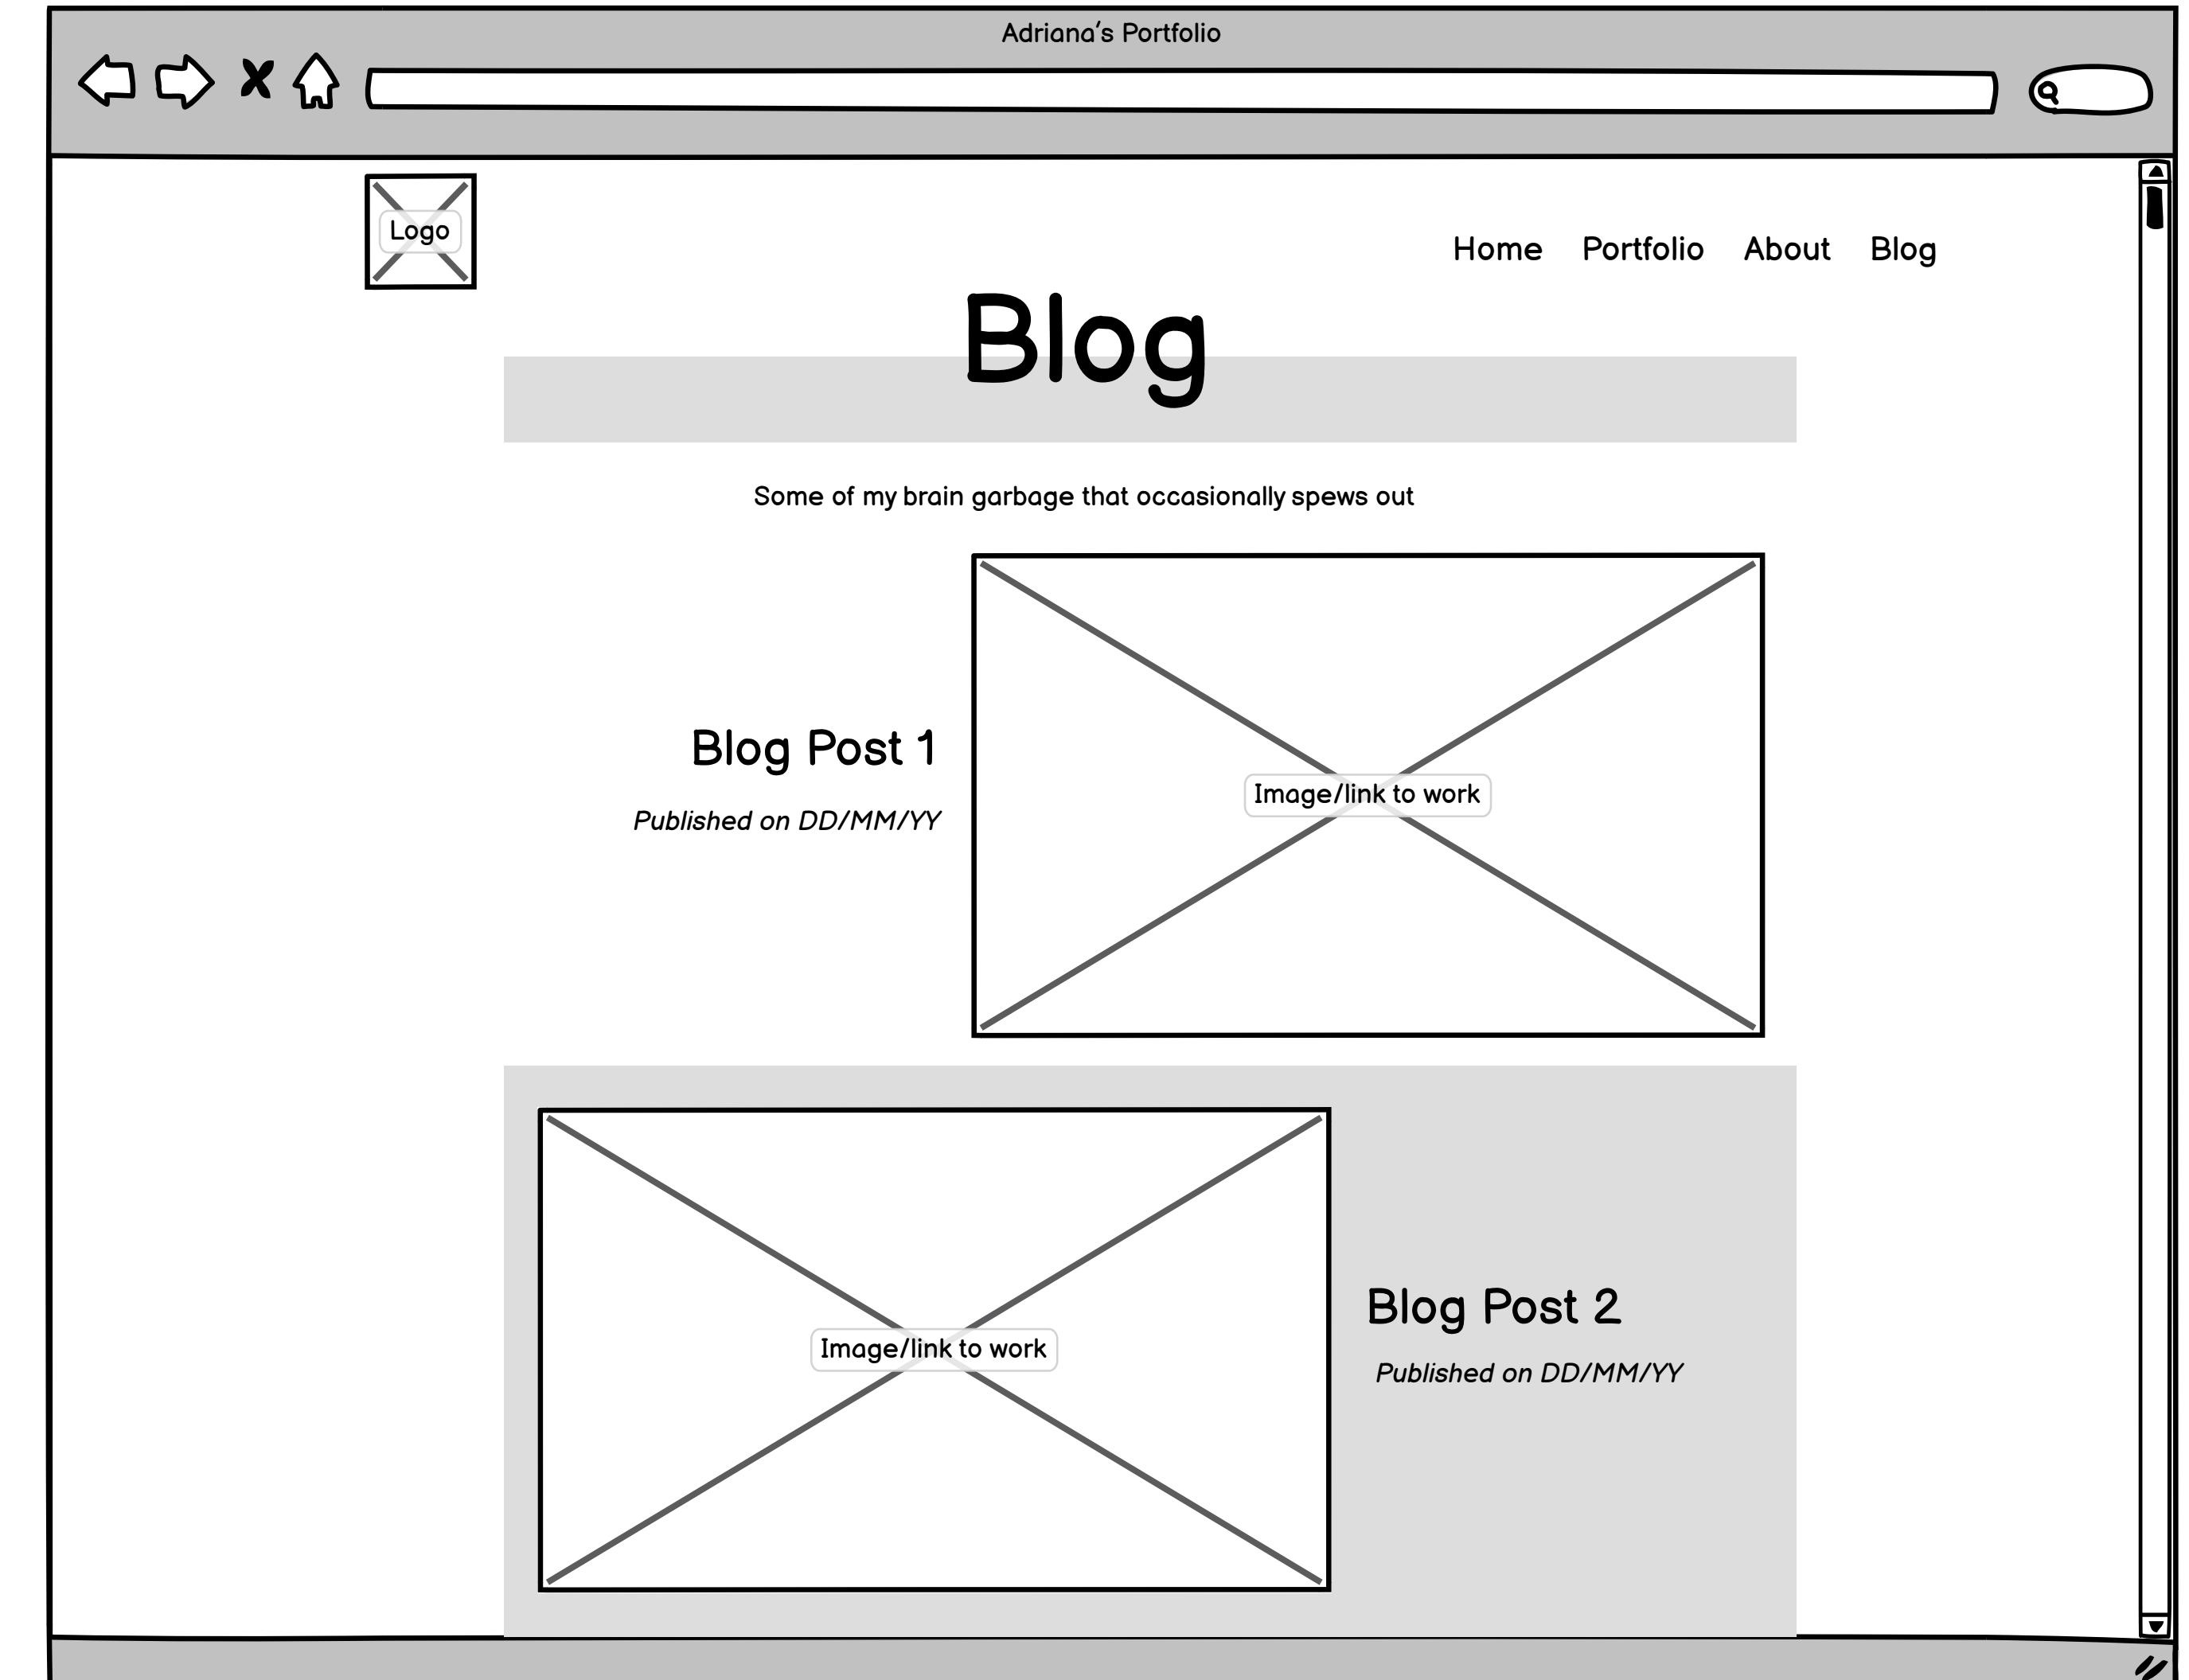

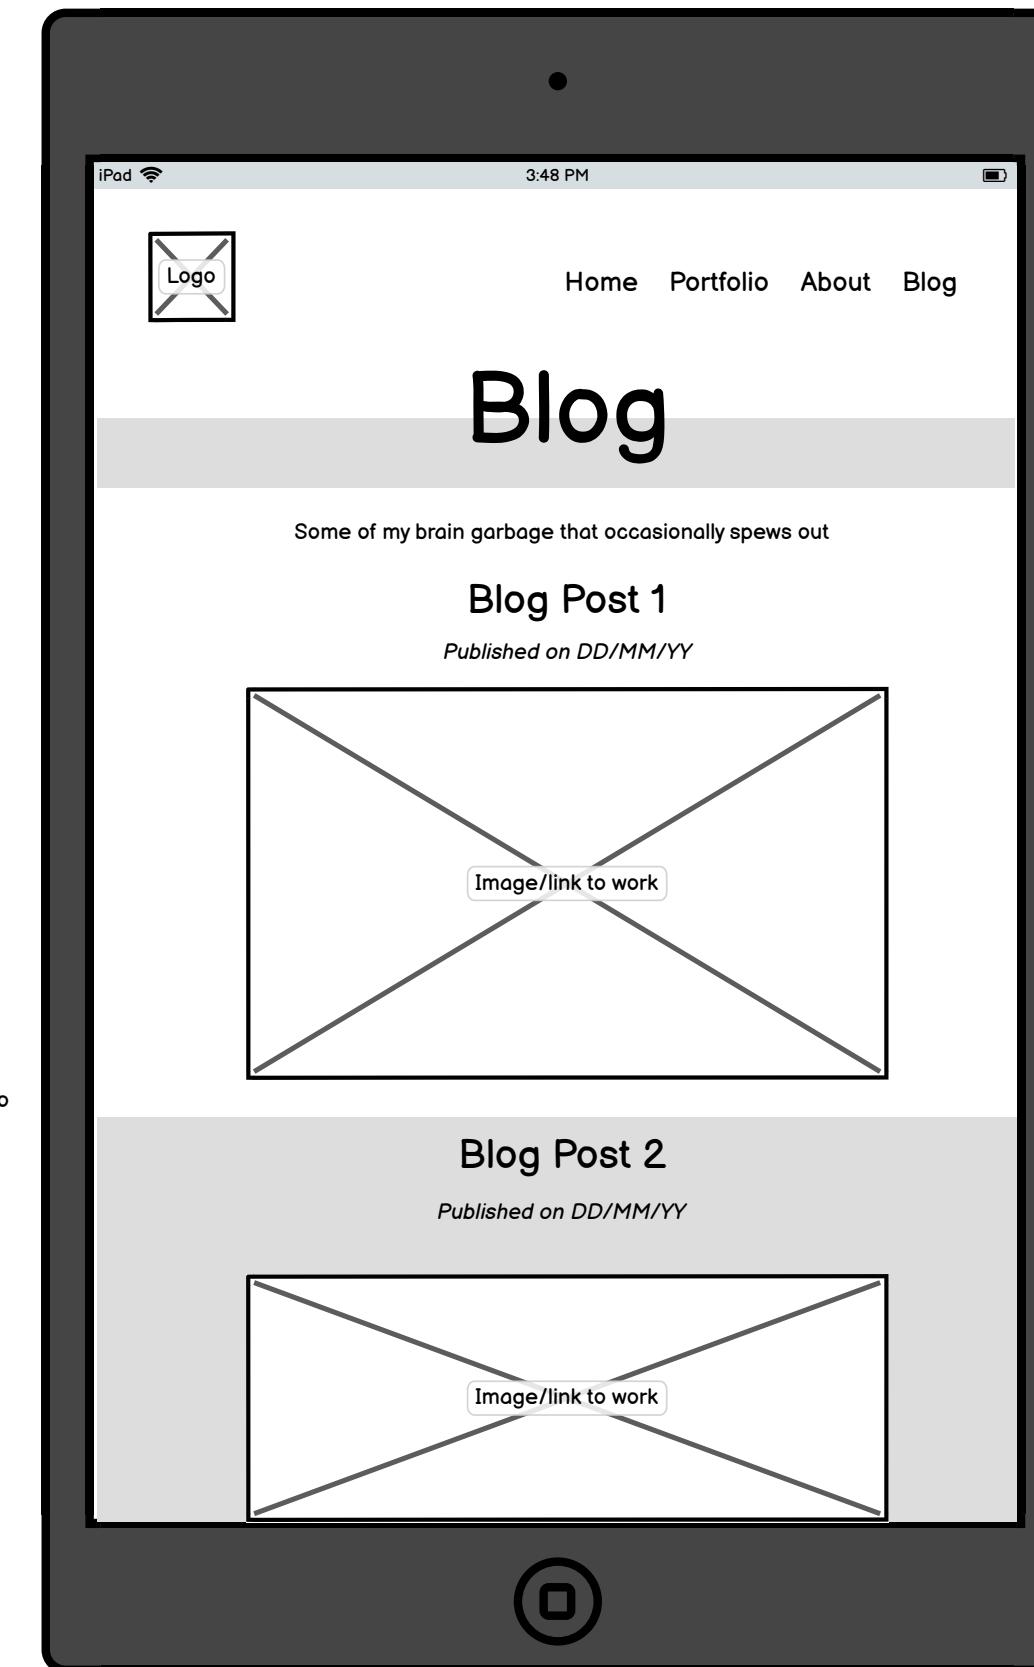

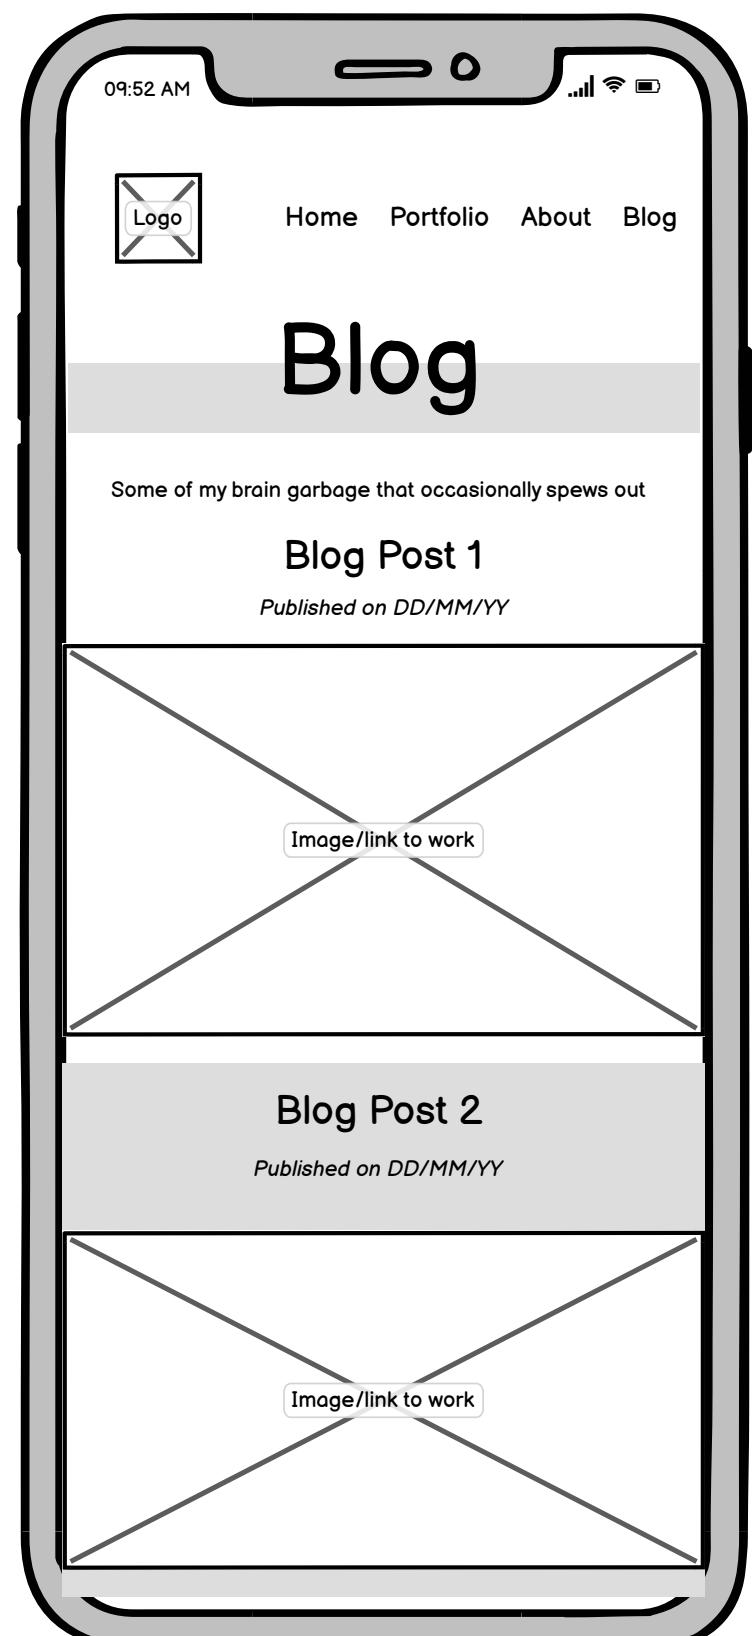

Wireframes - About

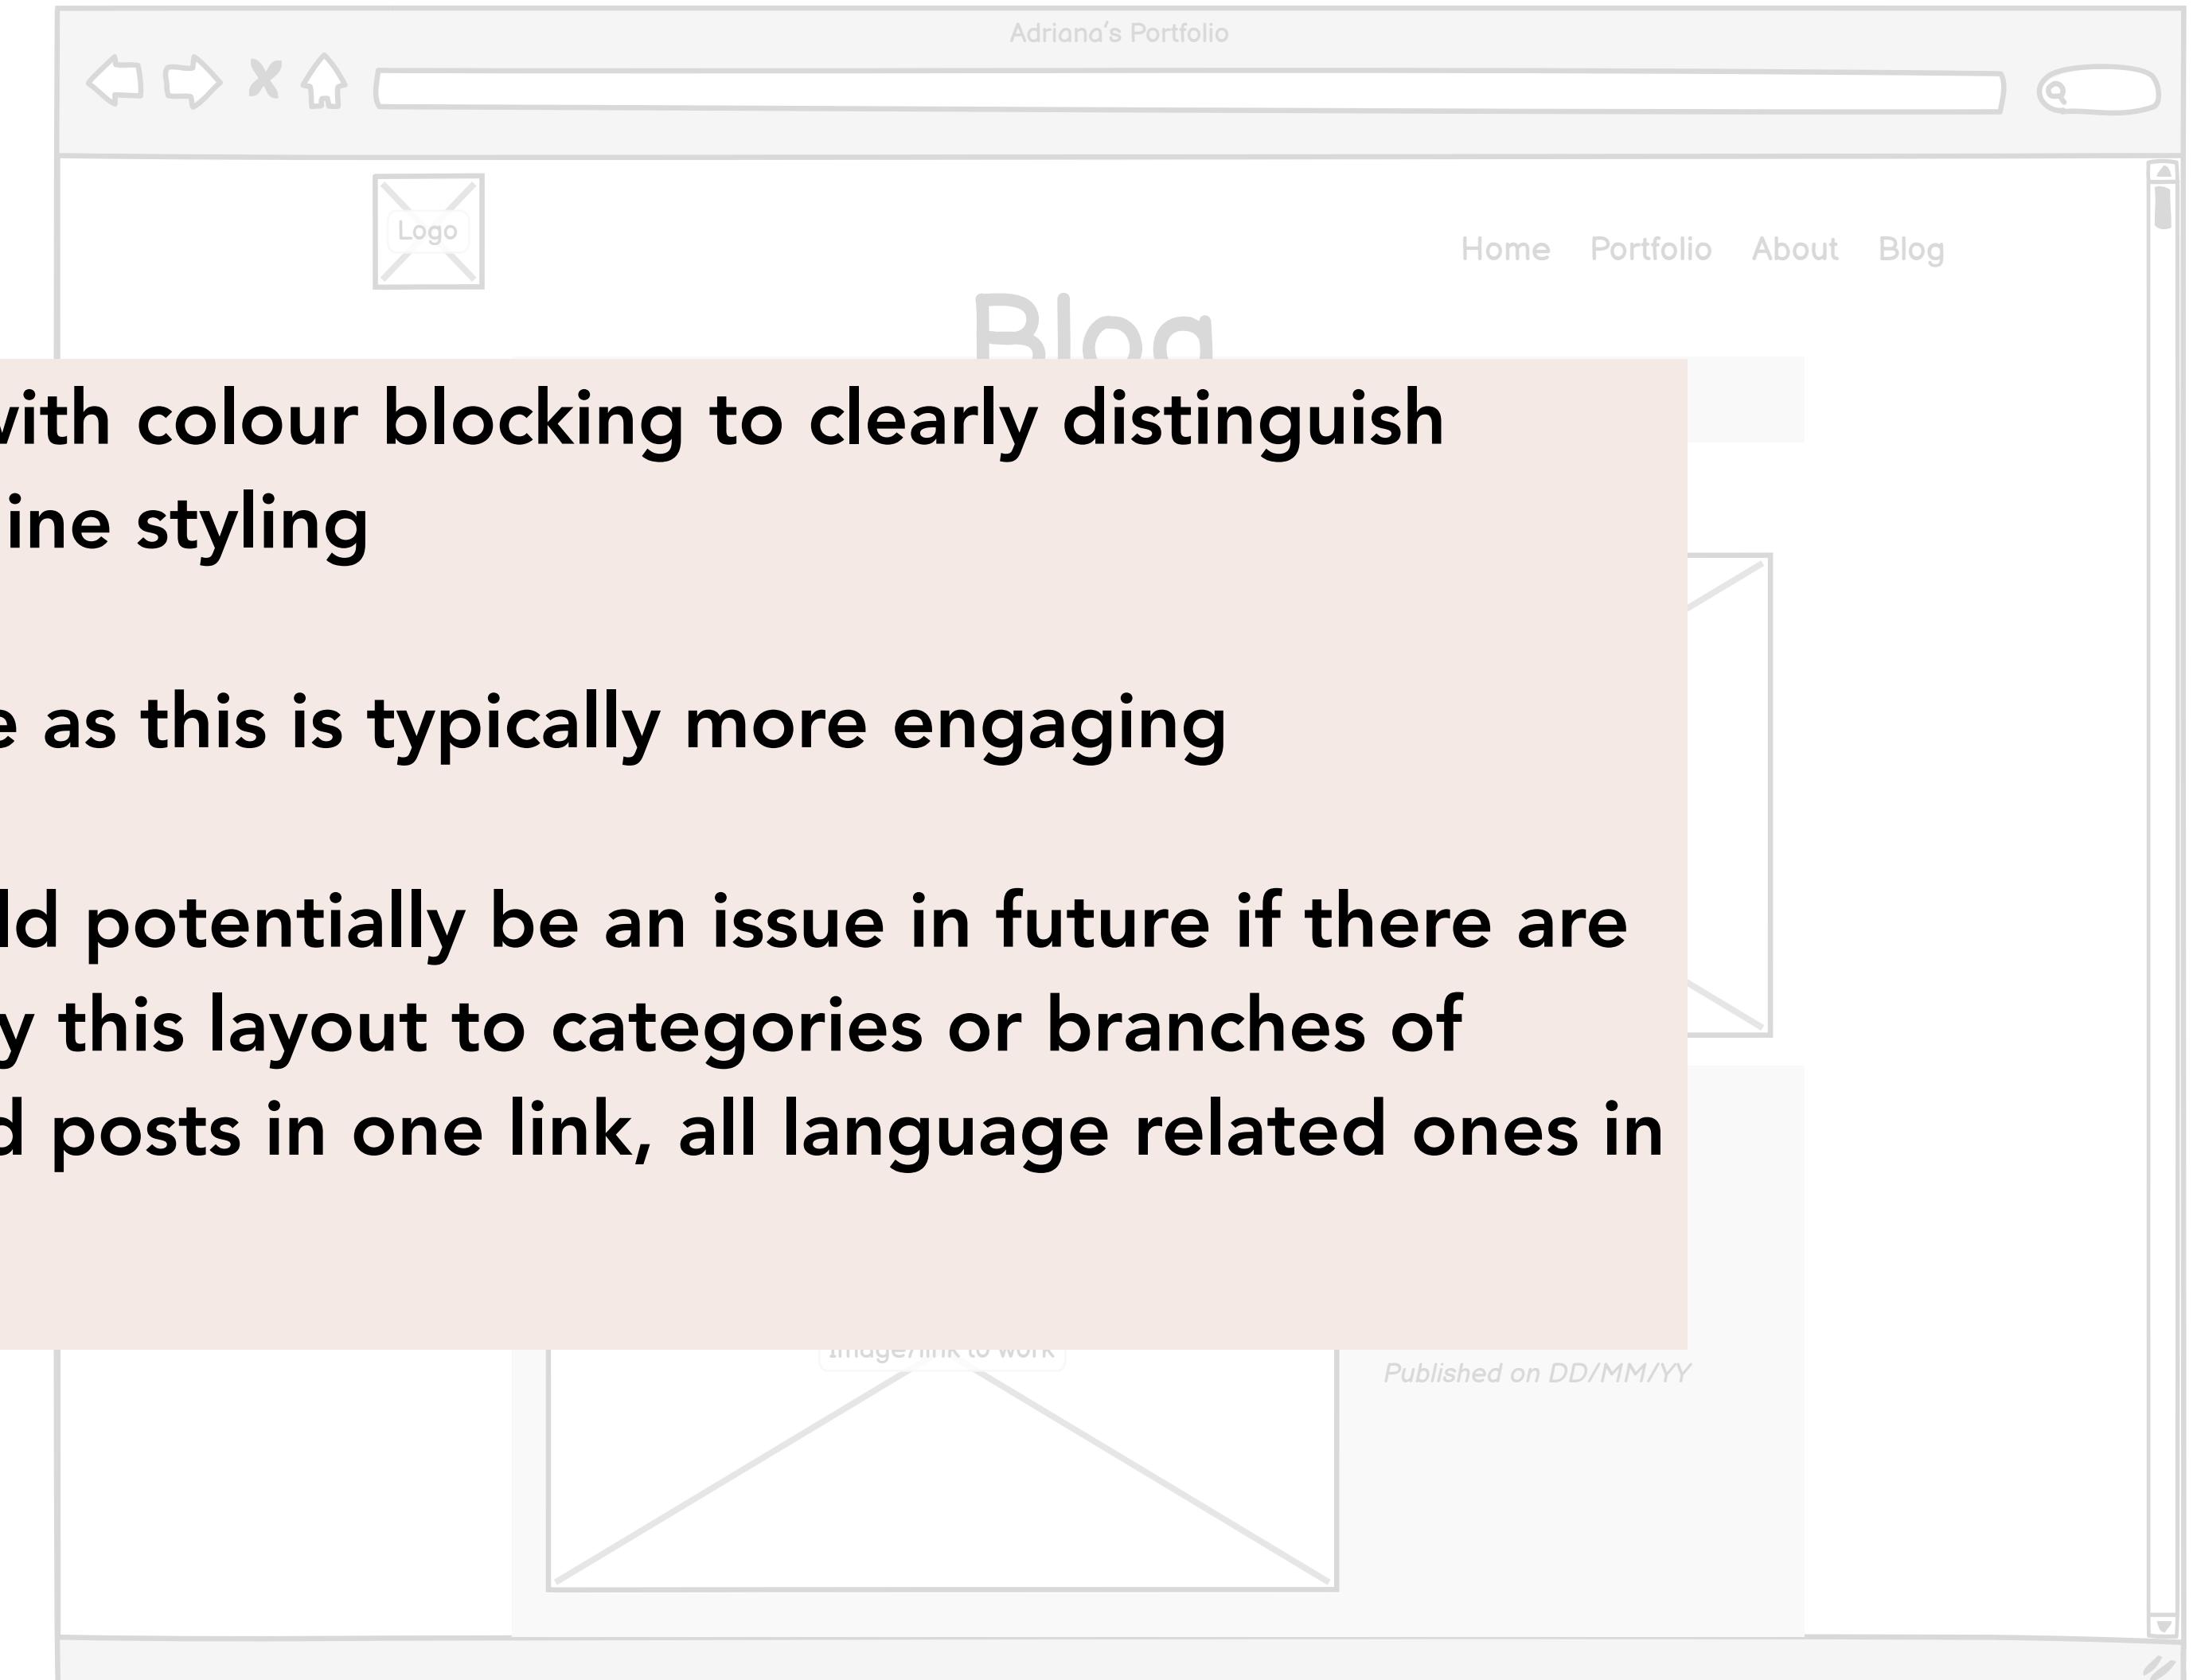

A wireframe diagram showing three devices in a horizontal stack. The top device is a desktop computer browser window titled "Adriana's Portfolio". The middle device is an iPad showing a smaller version of the same "About" page. The bottom device is a mobile phone, identical to the one shown on the left. All three screens display the same "About" page content as described in the mobile phone wireframe.

- **More personal information including previous education, work experiences, languages, specific focus on showing a balance between personality and professionalism**
- **Picture (flattering, of course)**
- **Links to get in touch in a variety of platforms for user ease - maybe not looking for a new hire but willing to connect on LinkedIn for example**

Wireframes - Blog

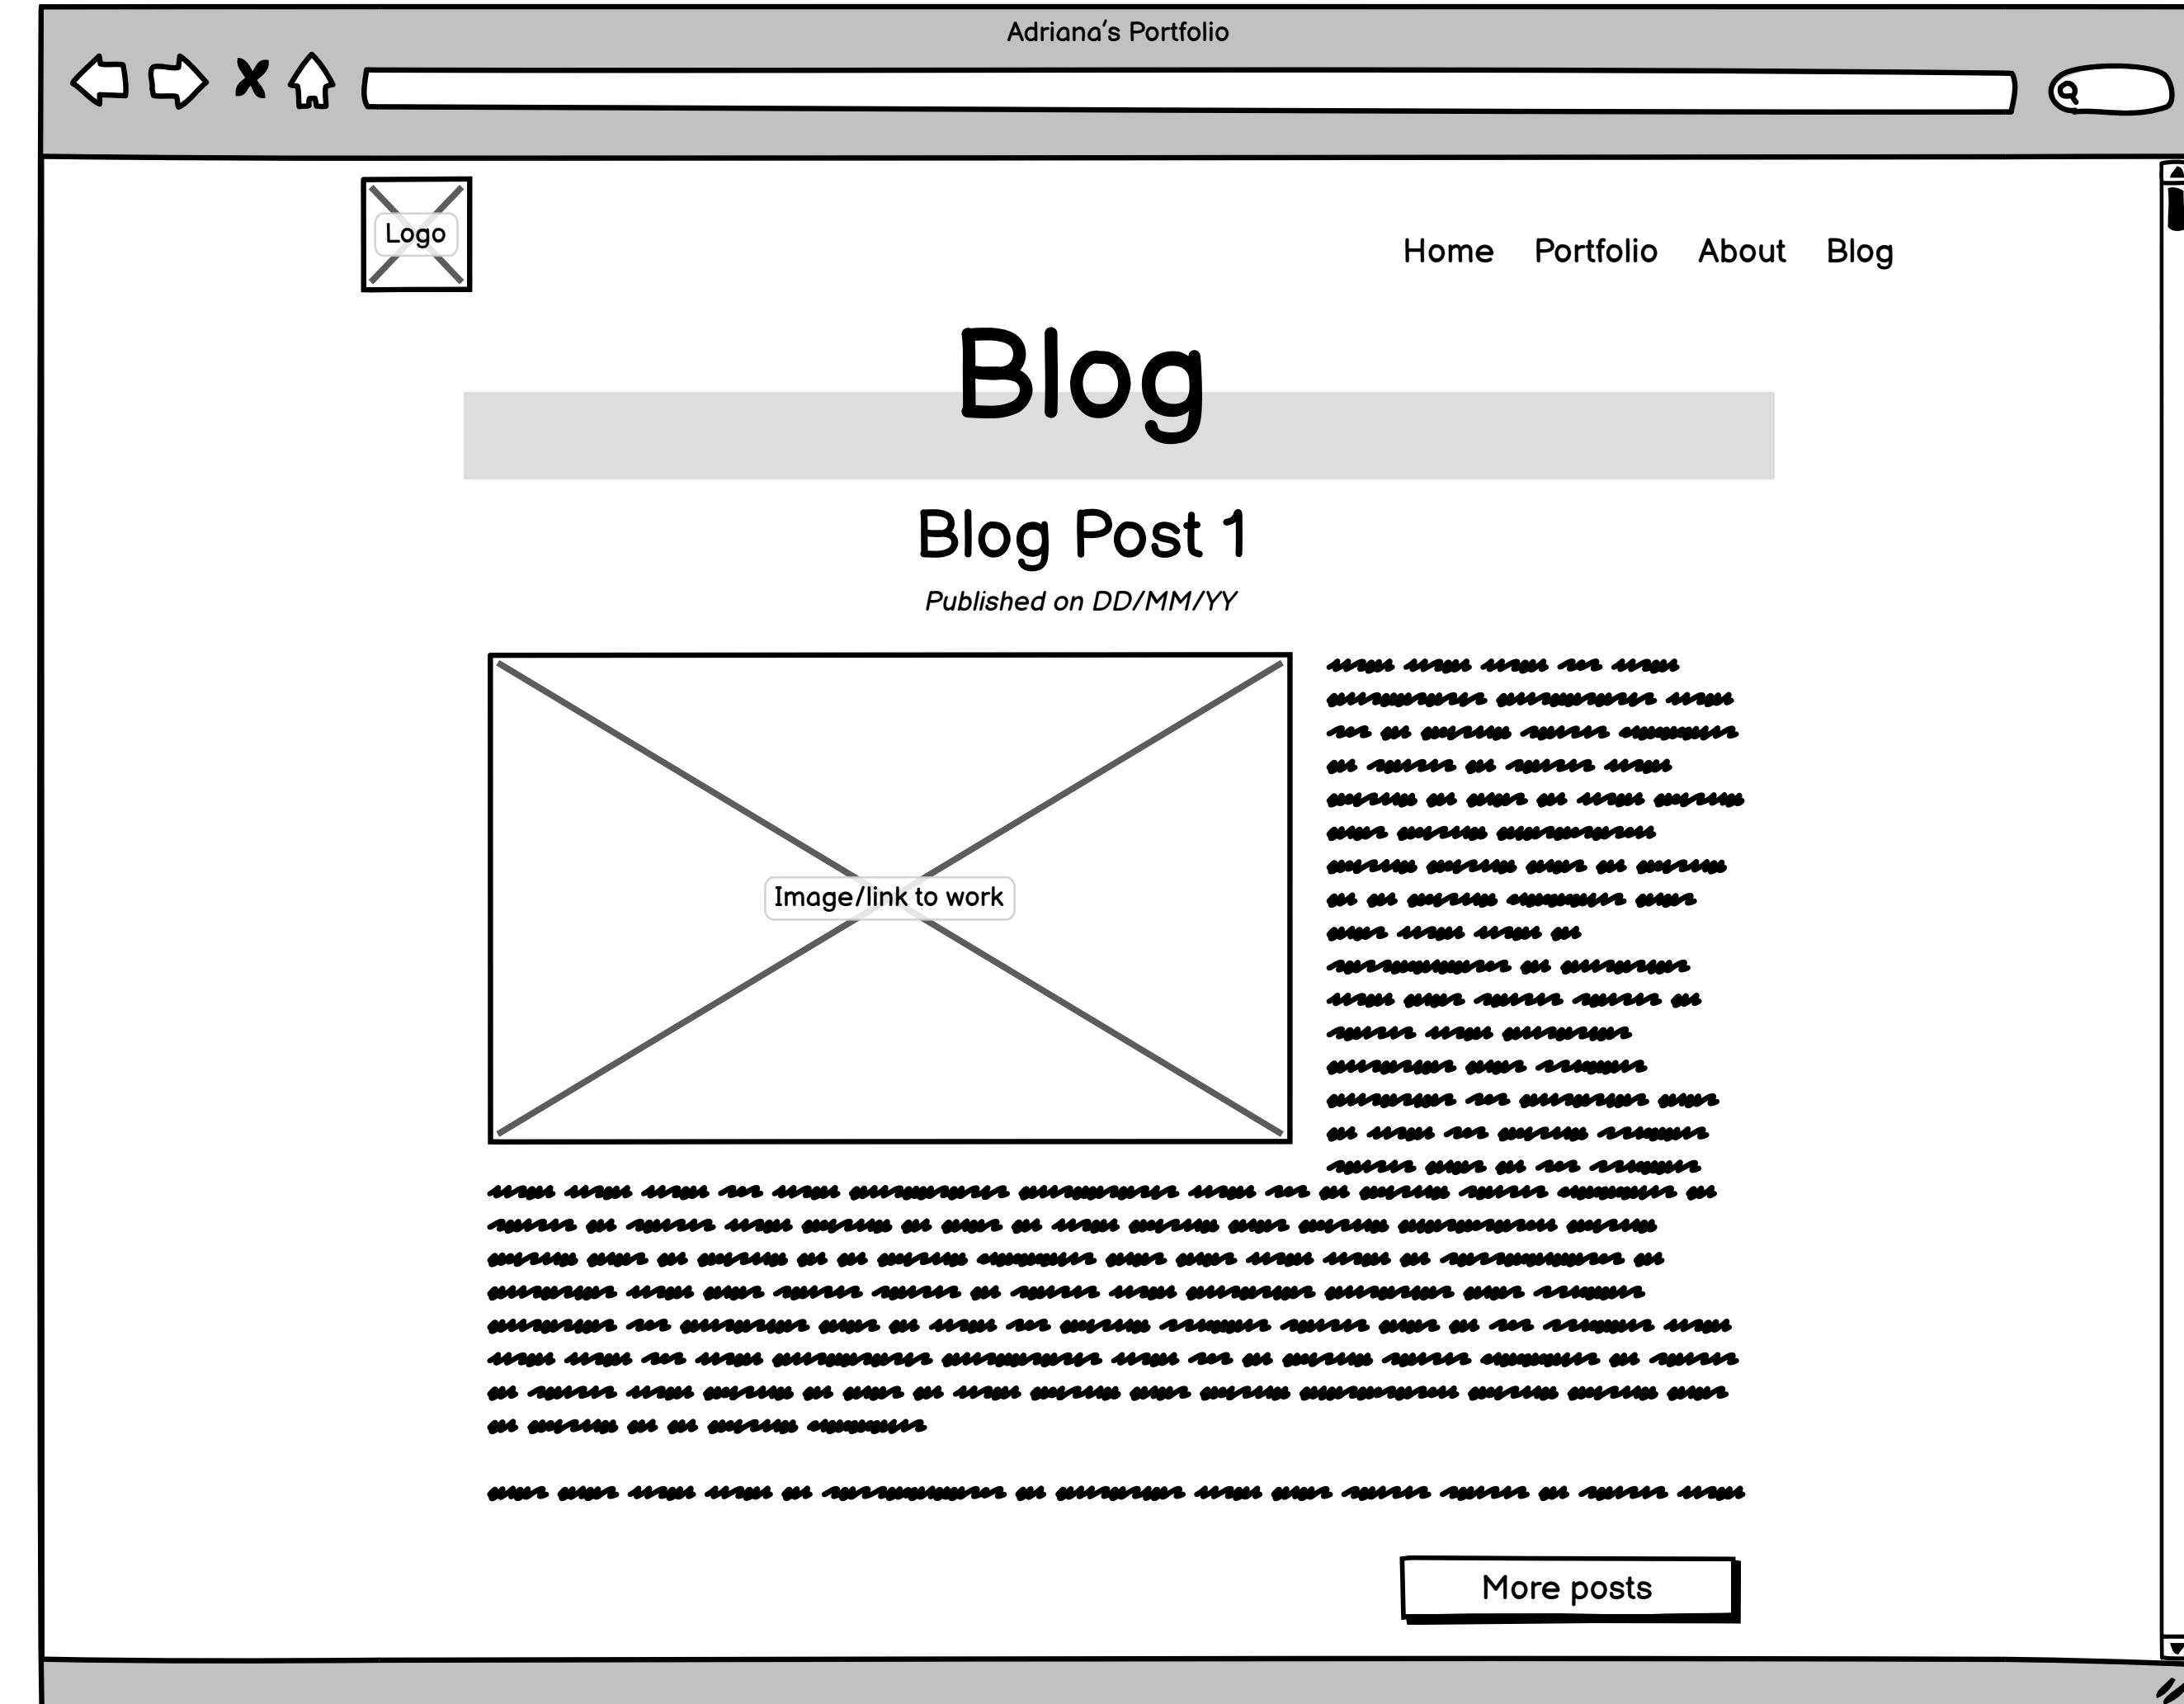

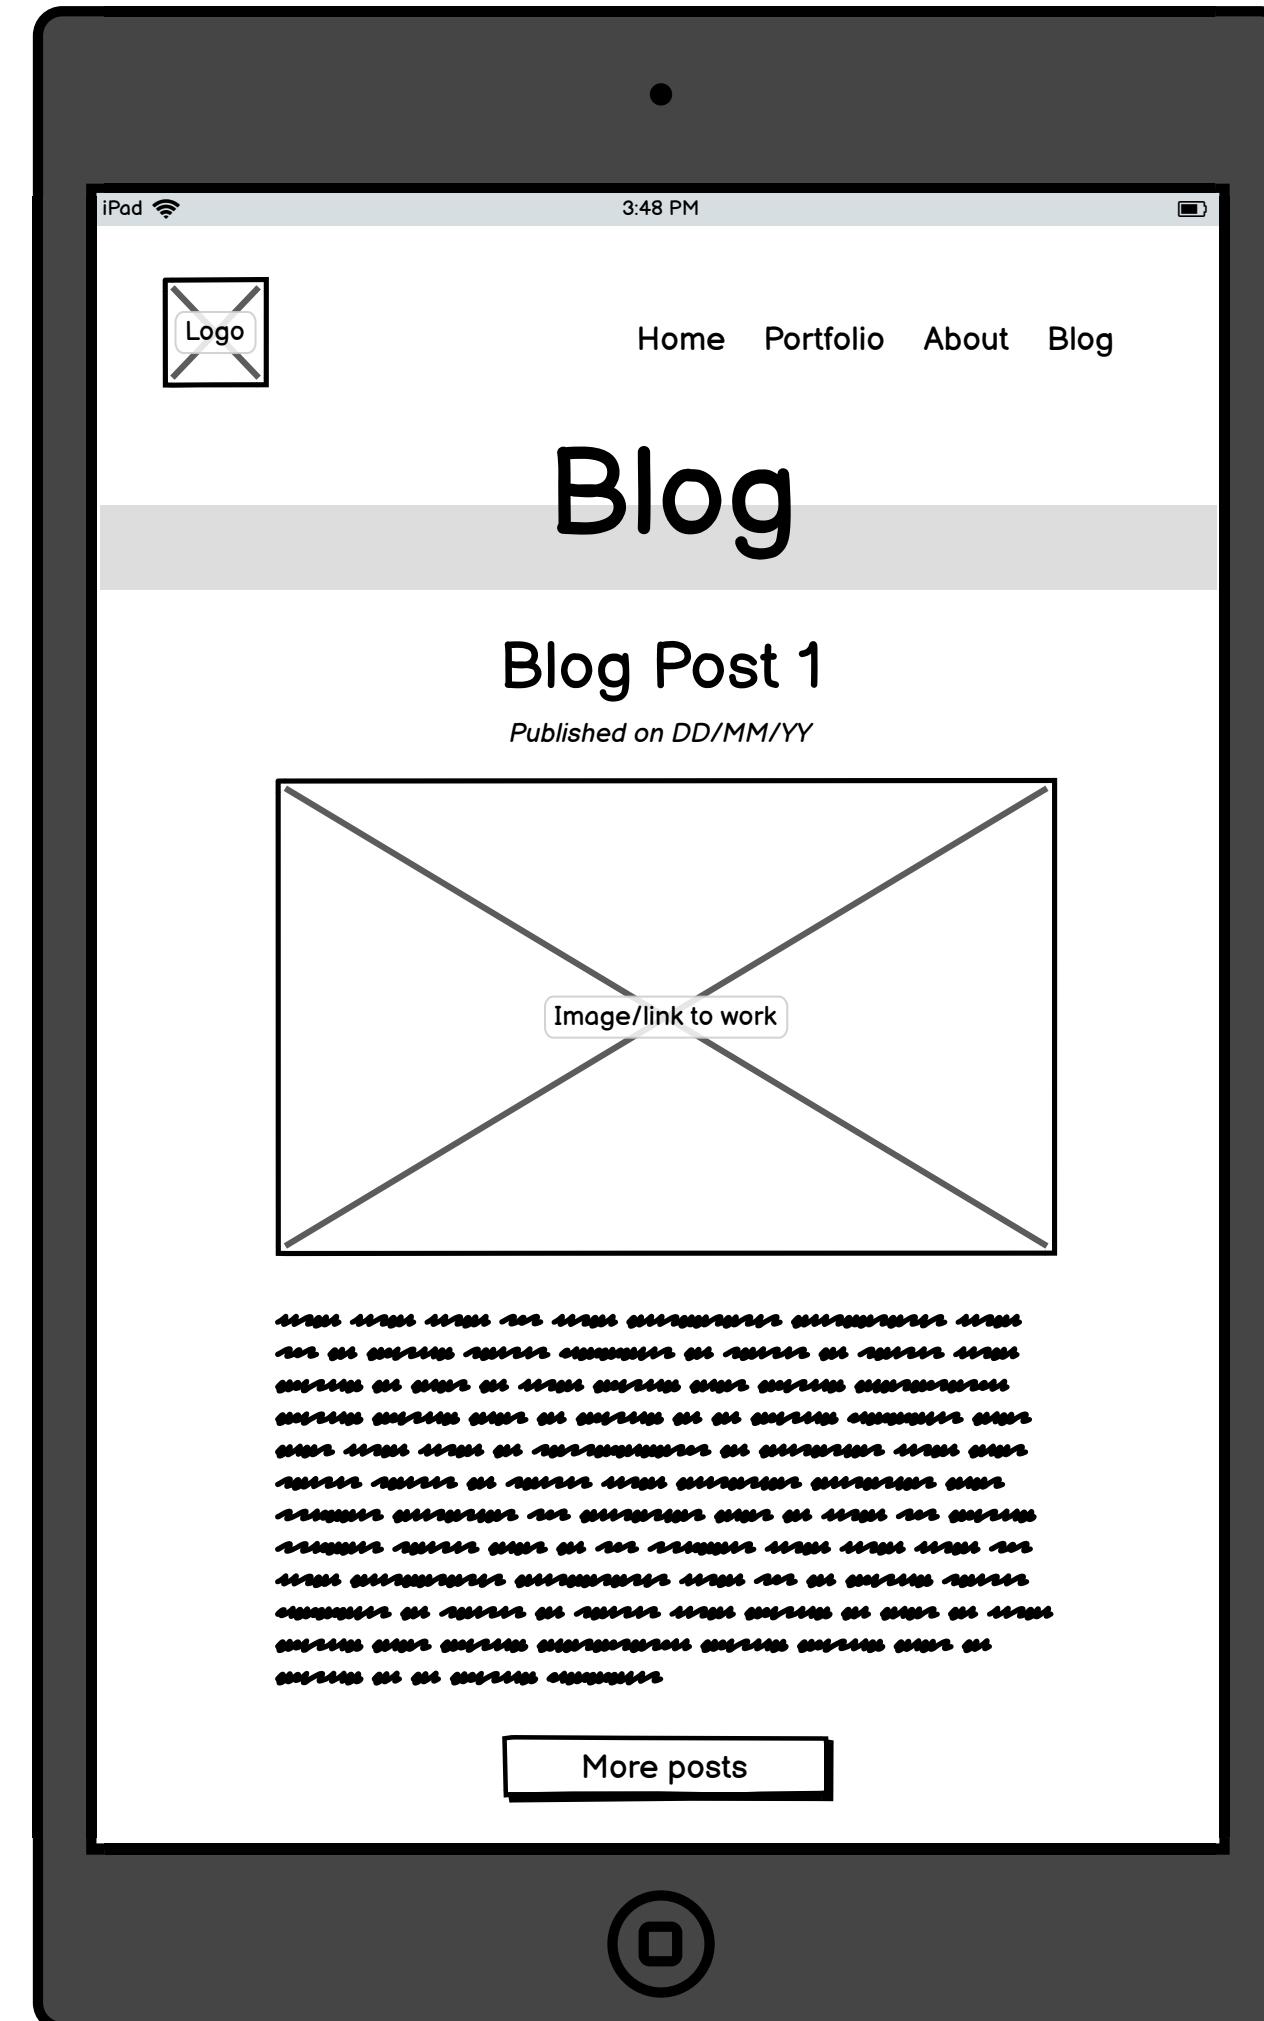

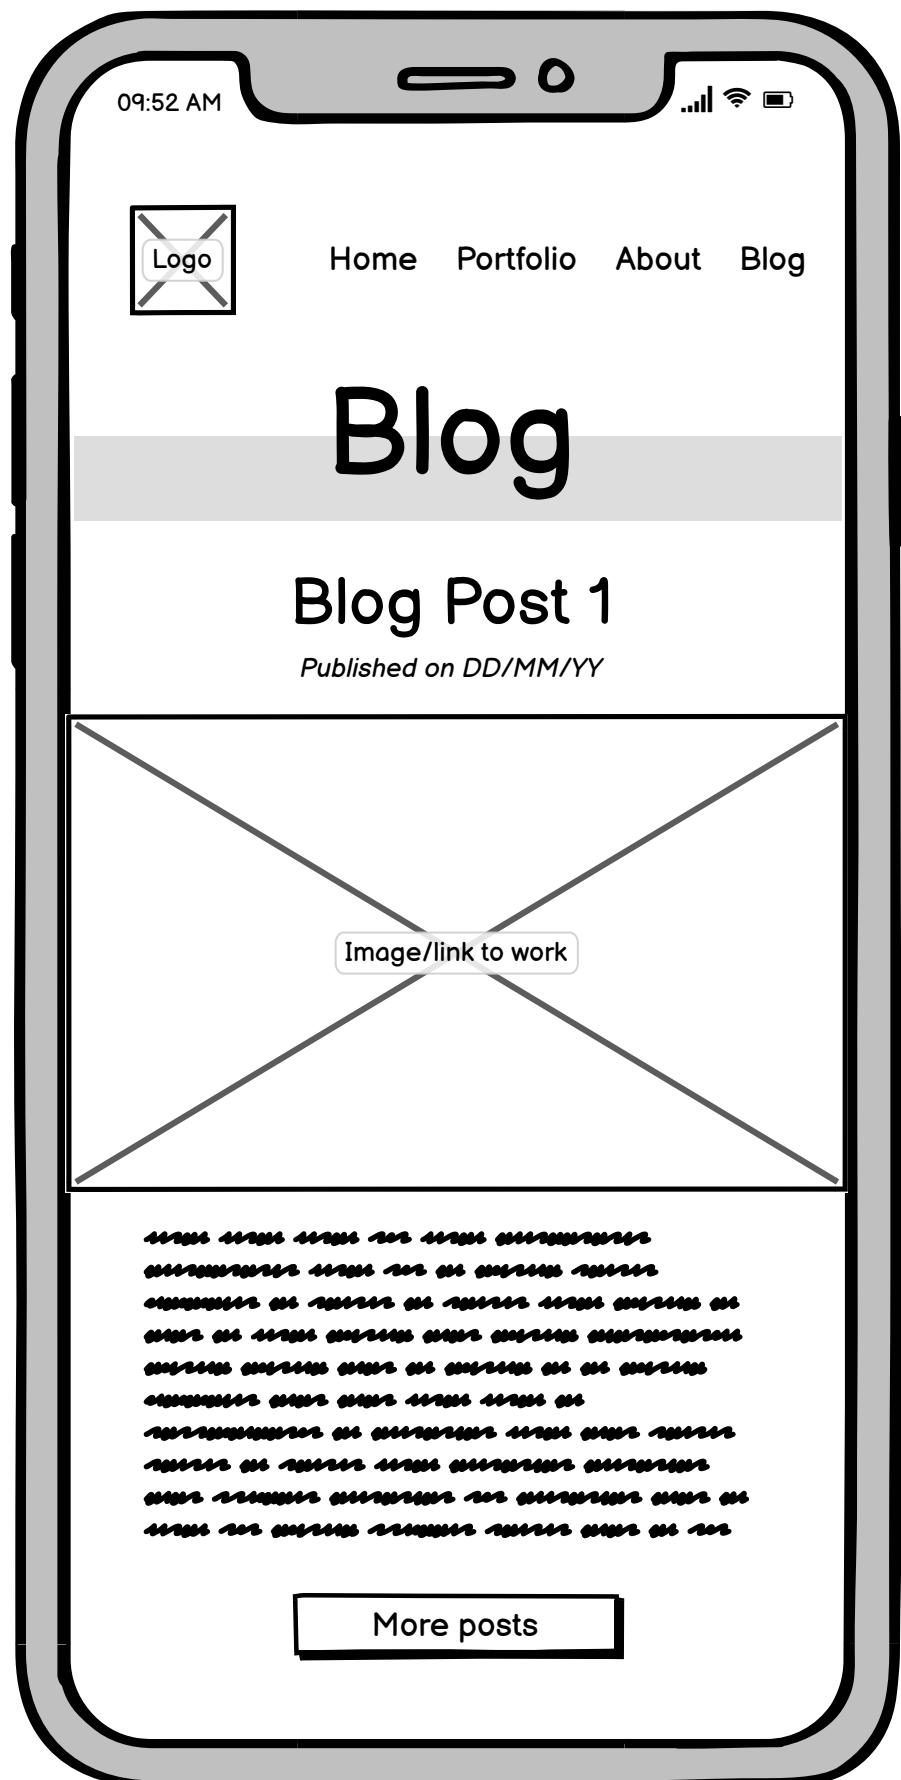

Wireframes - Blog

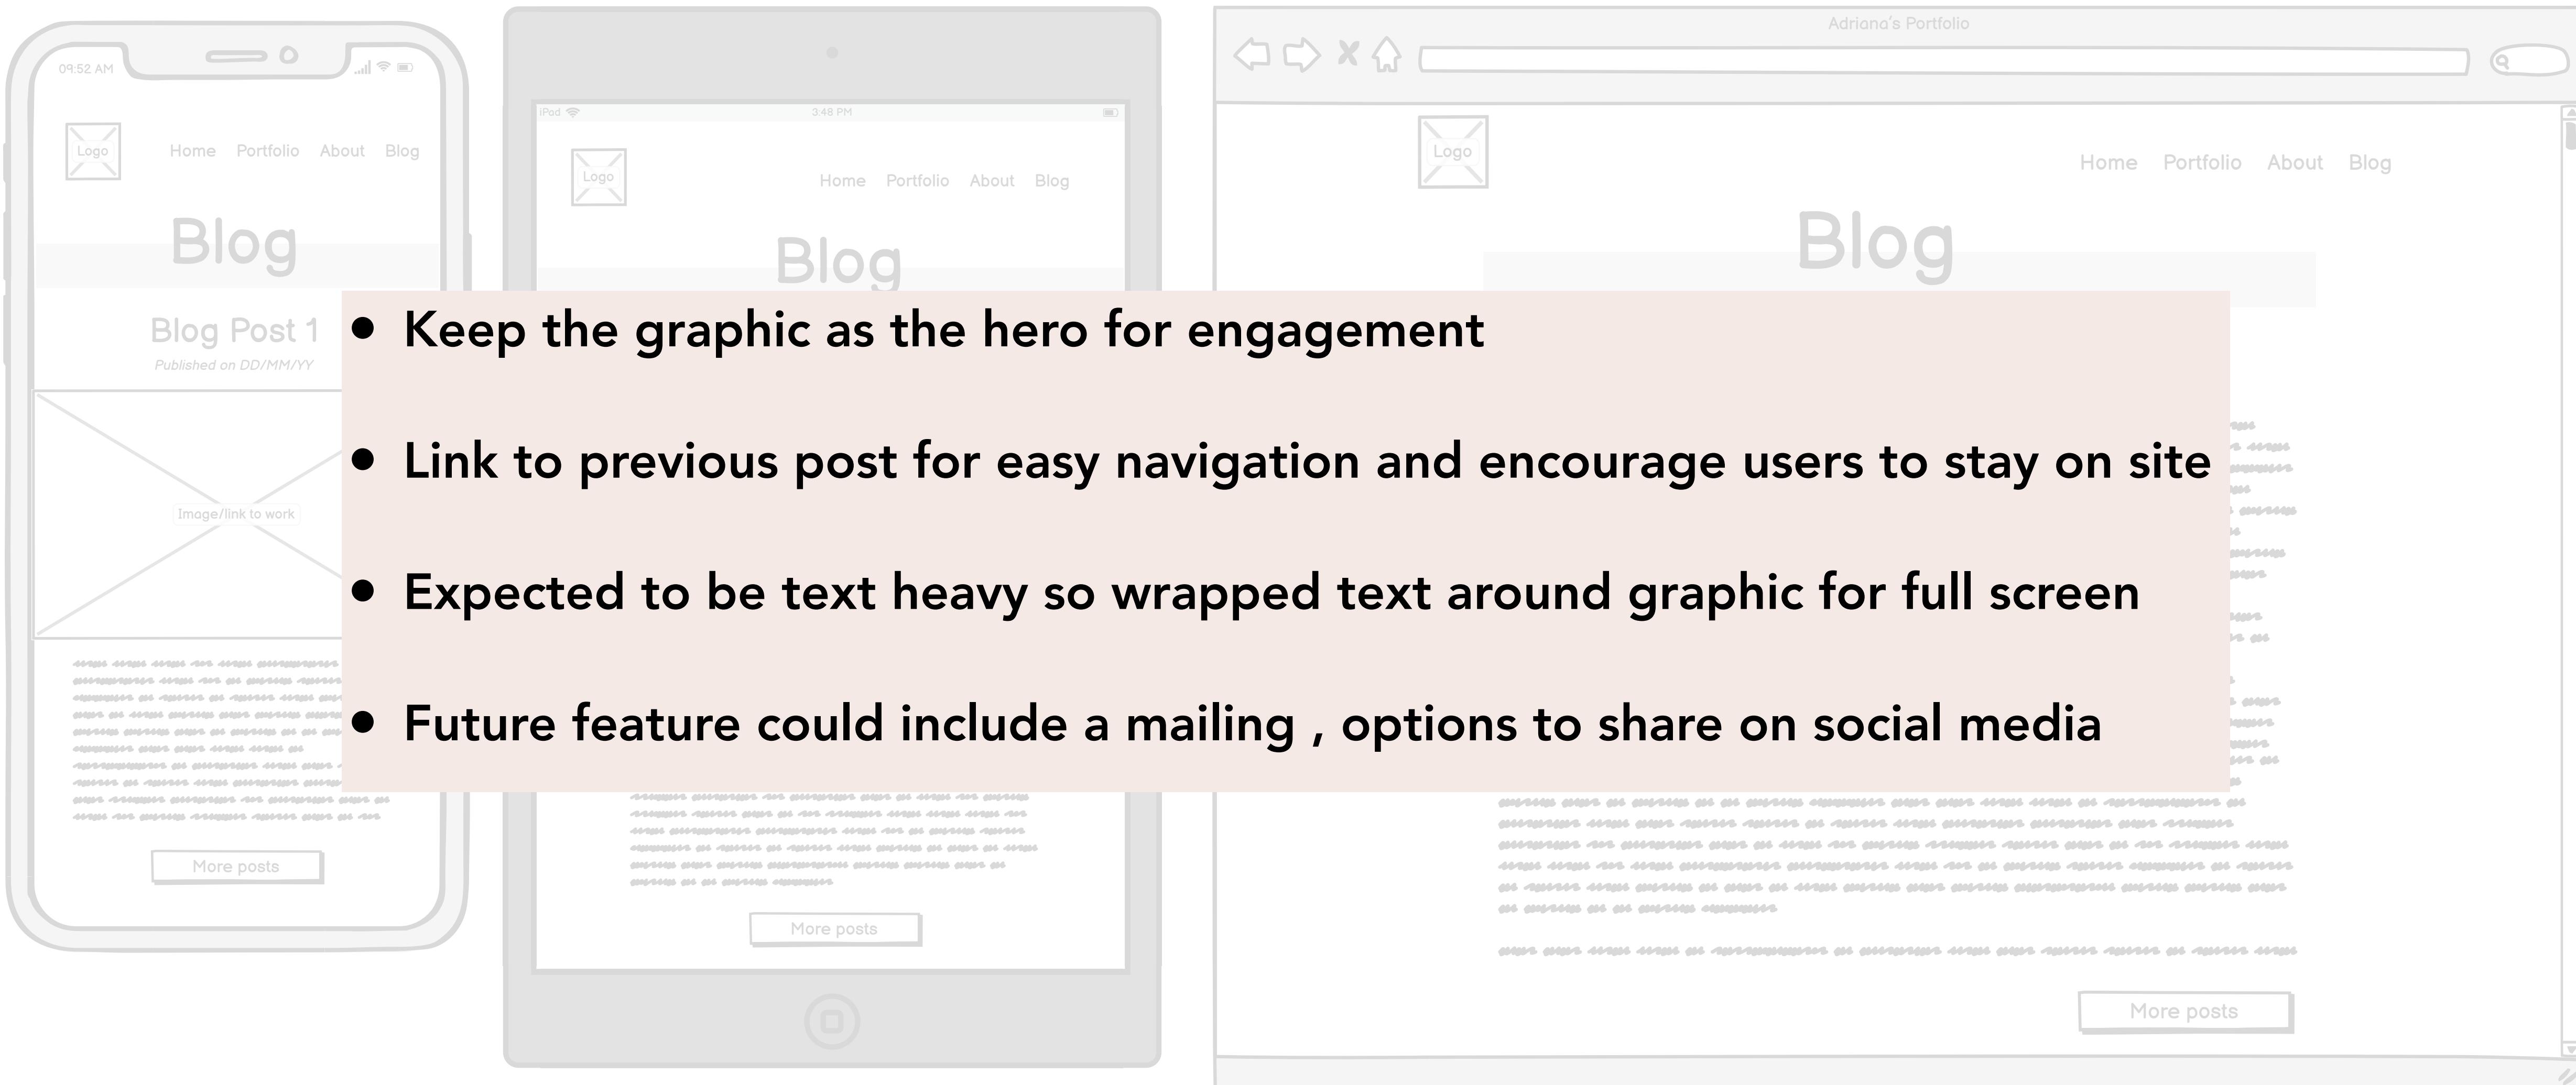

- Same style as portfolio page with colour blocking to clearly distinguish between posts, and to streamline styling
- Graphic to be the main feature as this is typically more engaging
- Scroll through all articles - could potentially be an issue in future if there are lots of posts - in this case apply this layout to categories or branches of content - eg. All design related posts in one link, all language related ones in another

Wireframes - Blog Posts

Wireframes - Blog Posts

Design

- Already have a Portfolio I designed on WIX so adapted this design to reflect new needs
- Clean, minimalistic and modern look - clear call to actions like obvious links
- Updated some colours to pass contrast rules for accessibility, updated navigation to reflect my skill levels and time constraints

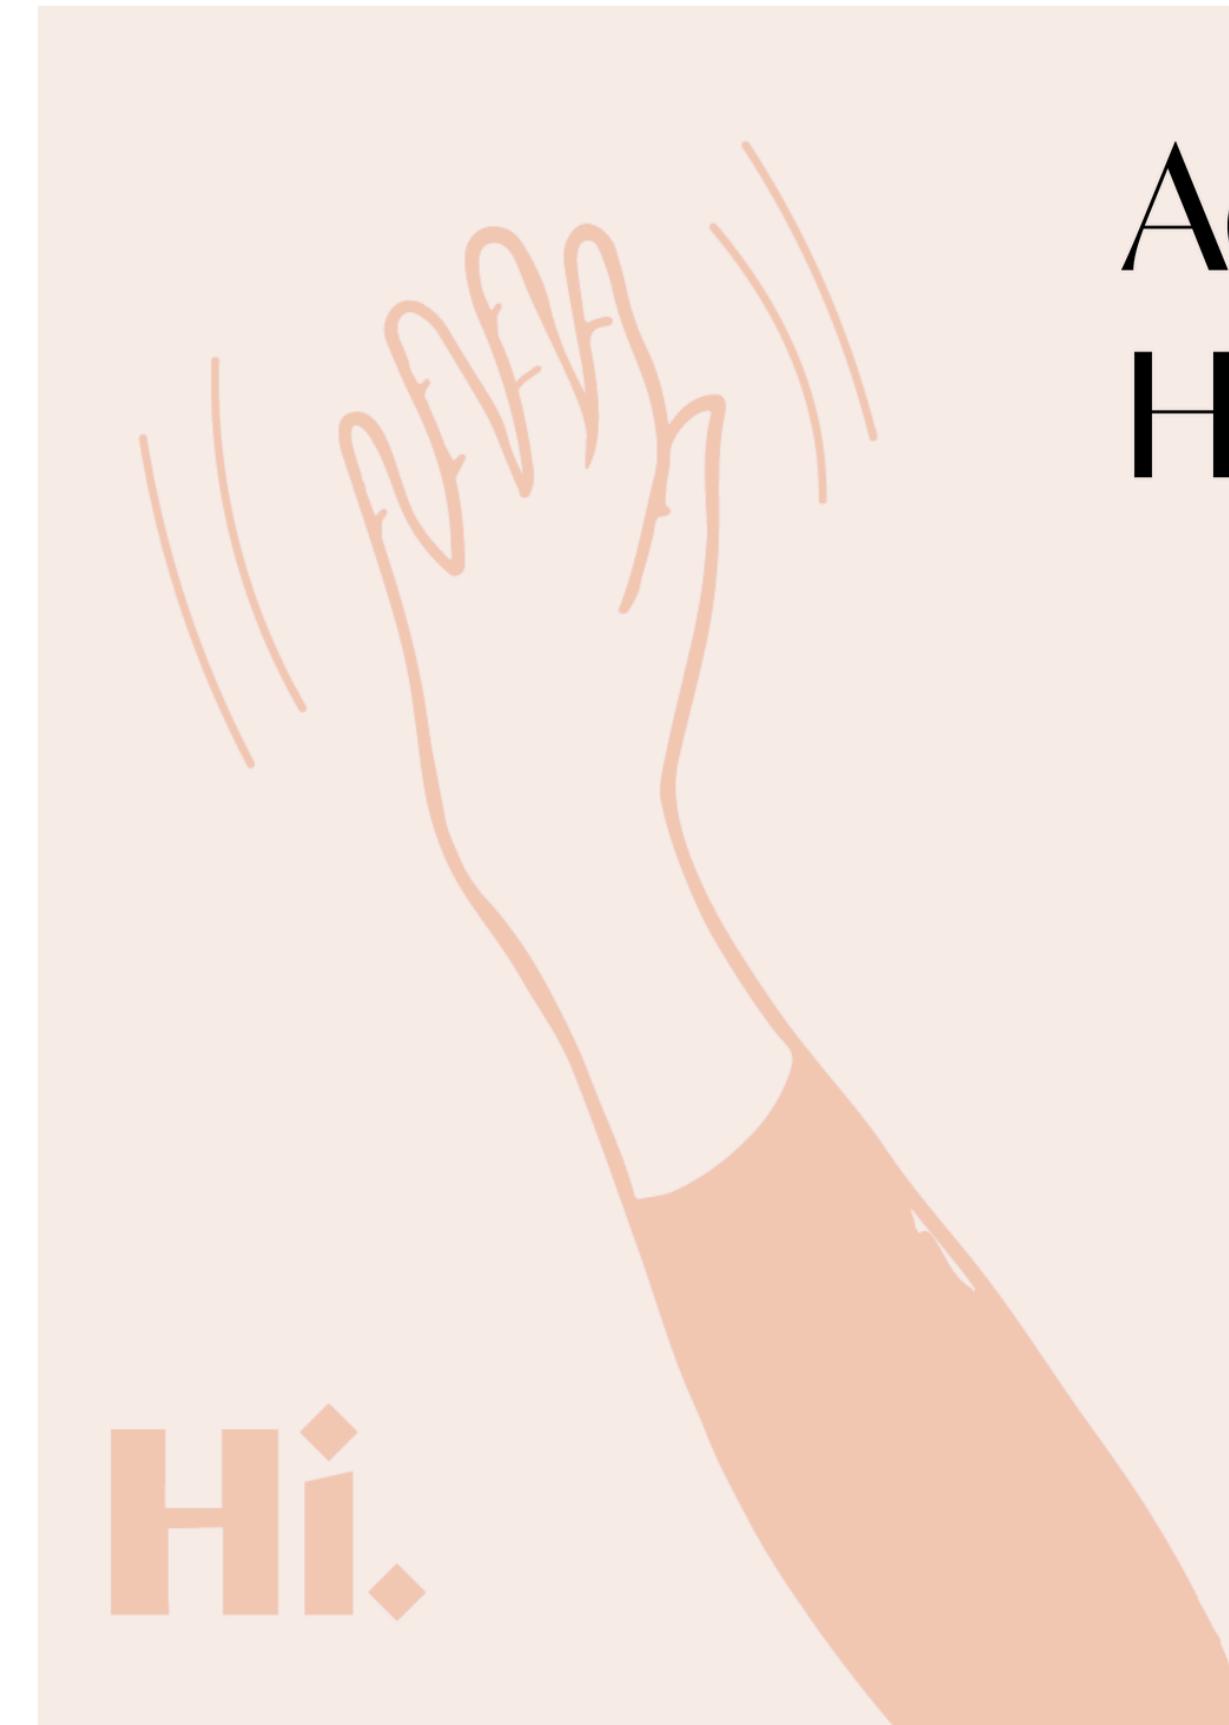

ah.

Design

ah.

- Mostly inspired by layout as future content will be more dev related and less graphic/design related
- Basic look and feel to be the same - on brand for personal style, important for personal 'branding' and creating synergy between different projects

Graphic Design

Webpage/social media banners.

Components

All pages -

- Navigation bar
- Footer with social links
- Consistently styled header to clearly indicate where the user is and what content they can expect
- Consistent colour scheme and typography encouraging personal brand

Components

Home page

- Hero content with image and header with the purpose of creating an engaging welcome

Portfolio/Blog page

- Large wrapper container with articles to organise each content block, utilising grid display to format for different screens

About page

- Graphics and text to introduce myself - visually and in written form
- Strong, clear call to actions for desired user engagement

Blog post page

- Hero image and header
- Organised content
- Strong, clear call to actions

Review of Development

Triumphs

- Confident using Flexbox in CSS
- Confident using HTML
- Looks and feels how I planned
- Feels very responsive

Challenges

- Managing content layout for the desktop media query - I designed a lot of formatting changes for larger screens that required me to use Grid a lot, which I'm less comfortable with
- Discovered a 'fixed' navbar is not the best solution and now will look for 'sticky' option (time permitting)
- Animations - finding a balance between purposeful and engaging vs just showing off that 'I can', while simultaneously worrying that none makes me appear incompetent

Review of Development

Ethical Concerns

- Putting my personal photo and contact details on a public website
- Being inspired vs plagiarism for animations/cool features

Favourite Parts

- Overcoming challenges
- Problem solving
- Continuing to learn and develop new skills
- Seeing a tangible result from my work
